Alternative Urban Futures challenges existing models of urban development and promotes alternative paradigms, processes, and technologies designed to fulfill human needs and limit the harmful impacts of human activities on the environment. The book focuses on how planners and policy makers can develop and manage essential urban infrastructures in ways that support sustainable development in the areas of waste management, water supply and management, energy production and use, building design and construction, land-use, transportation, and food systems. Each chapter features case studies that provide concrete examples of how ecologically and socially responsible urban and sustainable development planning and policy approaches have been successfully implemented in cities around the world. The book is especially effective in its emphasis on recently published statistics and writing supporting new planning and policy recommendations. Each chapter ends with a summary, accompanied by a list of questions that can be addressed with information provided in the text.

City visions represent shared, and often desirable, expectations about our urban futures. This book explores the history and evolution of city visions, placing them in the wider context of art, culture, science, foresight and urban theory. It highlights and critically reviews examples of city visions from around the world, contrasting their development and outlining the key benefits and challenges in planning such visions. The authors show how important it is to think

about the future of cities in objective and strategic ways, engaging with a range of stakeholders - something more important than ever as we look to visions of a sustainable future beyond the COVID-19 crisis.

Recapturing Democracy is a short yet synoptic introduction to urban democracy in our era of political neoliberalism and economic globalization. Combining an original argument with a number of case studies, Mark Purcell explores the condition of democracy in contemporary Western cities. Whereas many scholars focus on what Purcell calls "procedural democracy" - i.e., electoral politics and access to it - he instead assesses "substantive democracy." By this he means the people's ability to have some say over issues of social justice, material well being, and economic equality. Neoliberalism, which advocates a diminished role for the state and increasing power for mobile capital, has diminished substantive democracy in recent times, he argues. He looks at case studies where this has occurred and at others that show how neoliberalism can be resisted in the name of substantive democracy. Ultimately, he utilizes Henri Lefebvre's notion of "the right to the city," which encompasses substantive as well as procedural democracy for ordinary urban citizens.

recent developments and data in urban and metropolitan affairs. Its balanced and realistic approach helps students understand the nature of urban politics and the difficulty of finding effective "solutions" in a suburban and global age. The ninth edition has been thoroughly rewritten and updated with a continued focus on economic development and race, plus renewed attention to globalization, gentrification, and changing demographics. Boxed case studies of prominent recent and current urban development efforts provide material for class discussion, and concluding material demonstrates the tradeoff between more "ideal" and more "pragmatic" urban politics. Key changes in this edition include: Every chapter has been thoroughly updated and rewritten. The Ninth Edition reflects the most current census data and the newest trends in such areas as the "new immigration," suburbanization, gentrification, and big-city revivals; There is coverage of the big-city pension crisis and politics in Stockton, Detroit, and other cities facing possible bankruptcy; A brand-new opening chapter introduces the concepts of the Global City, the Entertainment City, and the Bankrupt City; New photos and boxes appear throughout the book; Increased coverage of policies for sustainable urban development.

you with background, expertise, and inspiration for designing with urban agriculture. It shows you how to grow food in buildings and cities, operate growing systems, and integrate them with natural cycles and existing infrastructures. It teaches you the essential environmental inputs and operational strategies of urban farms, and inspires community and design tools for innovative operations and sustainable urban environments that produce fresh, local food. Over 70 projects and 16 in-depth case studies of productive, integrated systems, located in North America, Europe, and Asia, are organized by their emphasis on nutrient, water, and energy management, farm operation, community integration and design approaches so that you can see innovative strategies in action. Interviews with leading architecture firms, including WORKac, Kiss + Cathcart, Weber Thompson, CJ Lim/Studio 8, and SOA Architectes, highlight the challenges and rewards you face when creating urban agriculture systems. Catalogs of growing and building systems, a glossary, bibliography, and abstracts will help you find information fast.

Seeking Urban Transformation. Alternative Urban Futures in Zimbabwe tells the stories of ordinary people's struggles to remake urban centres. It interrogates and highlights the principle conditions in which urban transformation takes place. The main

Catalysts of the transformation are social movements and planning institutions. Social movements pool resources and skills, acquire land, install infrastructure and build houses. Planning institutions change policies, regulations and traditions to embrace and support a new form of urban development driven by grassroots movements. Besides providing a comprehensive analysis of planning and housing in Zimbabwe, there is a specific focus on three urban centres of Harare, Chitungwiza and Epworth. In metropolitan Harare, the book examines new housing and infrastructure series to the predominantly urban poor population; vital roles played by the urban poor in urban development and the adoption by planning institutions of grassroots-centered, urban-planning approaches. The book draws from three case studies and in-depth interviews from diverse urban shapers i.e. representatives and members of social movements, urban planners, engineers, surveyors, policy makers, politicians, civil society workers and students to generate a varied selection of insights and experiences. Based on the Zimbabwean experience, the book illustrates how actions and power of ordinary people contributes to the transformation of African cities.

It is difficult to imagine a world without the car, and yet that is exactly what Dennis and Urry set out to do in this provocative

new book. They argue that the days of the car are numbered: powerful forces around the world are undermining the car system and will usher in a new transport system sometime in the next few decades. Specifically, the book examines how several major processes are shaping the future of how we travel, including: Global warming and its many global consequences Peaking of oil supplies Increased digitisation of many aspects of economic and social life Massive global population increases The authors look at changes in technology, policy, economy and society, and make a convincing argument for a future where, by necessity, the present car system will be re-designed and re-engineered. Yet the book also suggests that there are some hugely bleak dilemmas facing the twenty first century. The authors lay out what they consider to be possible 'post-car' future scenarios. These they describe as 'local sustainability', 'regional warlordism' and 'digital networks of control'. After *The Car* will be of great interest to planners, policy makers, social scientists, futurologists, those working in industry, as well as general readers. Some have described the 20th Century as the century of the car. Now that century has come to a close - and things are about to change.

In response to both policy and conceptual debates, alternative narratives have begun to emerge about territorial governance and

policymaking. As local and regional policy actors strive to respond to the geographically uneven effects of the economic crises of the early twenty-first century, a crucial question emerges: what are the opportunities and challenges presented by alternative forms of territorially based governance and policy? The aim of this edited volume, therefore, is critically to explore the opportunities and challenges presented by different forms of territorial policy and governance. Drawing on conceptual debates and empirical research from the United Kingdom and other international contexts, the contributors engage with issues around the politics and governance of territorial development, economic development, planning and regeneration and the environment. Territorial Policy and Governance addresses the question of how alternative forms of territorial governance and policy can help to shape patterns of urban and regional development, highlighting the related opportunities, constraints and challenges that confront their operationalisation. This book will be essential reading for international audiences with an interest in territorial development, governance, politics, human geography and planning and regeneration.

After more than a century of heroic urban visions, urban dwellers today live in suburban subdivisions, gated communities,

edge cities, apartment towers, and slums. The contemporary cities we know are more often the embodiment of unexpected outcomes and unintended consequences rather than visionary planning. As an alternative approach for rethinking and remaking today's cities and regions, this book explores the intersections of critical inquiry and immediate, substantive actions. The contributions inside recognize the rich complexities of the present city not as barriers or obstacles but as grounds for uncovering opportunity and unleashing potential. Now Urbanism asserts that the future city is already here. It views city making as grounded in the imperfect, messy, yet rich reality of the existing city and the everyday purposeful agency of its dwellers. Through a framework of situating, grounding, performing, distributing, instigating, and enduring, these contributions written by a multidisciplinary group of practitioners and scholars illustrate specificity, context, agency, and networks of actors and actions in the re-making of the contemporary city.
