George Orwell's celebrated novella, Animal Farm, is a biting, allegorical, political satire on totalitarianism in general and Stalinism in particular. One of the most famous works in modern English literature, it is a telling comment on Soviet Russia under Stalin's brutal dictatorship based on a cult of personality which was enforced through a reign of terror. The book tells a seemingly simple story of farm animals who rebel against their master in the hope of stopping their exploitation at the hand of humans and creating a society where animals would be equal, free and happy. Ultimately, however, the rebellion is betrayed and the farm ends up in a state as bad as it was before. The novel thus demonstrates how easily good intentions can be subverted into tyranny.Orwell has himself said that it was the first book in which he had tried, with full consciousness of what he was doing, 'to fuse political purpose and artistic purpose into one whole.' The book was first published in England in 1945, and has since then remained a favourite with readers all over the world, and has consistently been included in all prestigious bestseller lists for the past many years.

Zooarchaeology, or the study of ancient animals, is a frequently side-lined subject in archaeology. This is bizarre given that the archaeological record is composed largely of debris from human-animal relationships (be they in the form of animal bones, individual artifacts or entire landscapes) and that many disciplines, including anthropology, sociology, and geography, recognise human-animal interactions as a key source of information for understanding cultural ideology. By integrating knowledge from archaeological remains with evidence from texts, iconography, social anthropology and cultural geography, **Beastly Questions: Animal Answers to Archaeological Issues** seeks to encourage archaeological students, researchers and those working in the commercial sector to offer more engaging interpretations of the evidence at their disposal. Going beyond the simple confines of 'what people ate', this accessible but in-depth study covers a variety of high-profile topics in European archaeology and provides novel interpretations of mainstream archaeological questions. This includes cultural responses to wild animals, the domestication of animals and its implications on human daily practice, experience and ideology, the transportation of species and the value of incorporating animals into landscape research, the importance of the study of foodways for understanding past societies and how animal studies can help us to comprehend issues of human identity and ideology: past, present and future.
