The Bradley could identify their target at more than 3,000 meters compared to the BMP-1 best night time acquisition of 400 meters, enhanced to 900 meters if they used a infrared searchlight. The Iraqi BMPs were hampered by poor maintenance, but more than that, the Bradley had the advantage of following the rule of mechanized warfare.

In the mid-1960s, the Soviet Union unveiled the BMP, the first true infantry fighting vehicle. A revolutionary design, the BMP marked a significant departure from the traditional armoured personnel carrier, with a lower silhouette and heavier armament than rival APCs. One of the most fearsome light-armoured vehicles of its day, it caused great consternation on the other side of the Iron Curtain as the Americans scrambled to design a machine to rival the BMP. The result was the M2/M3 Bradley. These Cold War icons first clashed - not on the plains of Europe, but in southern Iraq during the Gulf War of 1991. In many ways the end of the Vietnam War left the US army a spent force. Plagued by low morale, drug and race issues, and terrible public relations, the army faced an uphill climb in the effort to rebuild itself. The story of this reconstruction is mirrored in the rise of the Mechanized Infantryman. Deciding that the key to future conflict lay in highly trained and mobile warriors that could be delivered quickly to battle, the army adopted the mechanized infantryman as its frontline troops. This new, all volunteer force was given the best training and equipment. Most notably, they were to be deployed onto the battlefield from the new M2 Bradley Armoured Fighting Vehicle. This new breed of American warriors got their first test in the First Gulf War. Fighting in the deserts of Kuwait and Iraq, these soldiers proved that the US Army was once again a force with which to be reckoned. This book tells the story of the rise of the US mechanised infantryman, focusing on his recruitment, training, lifestyle and combat experiences in Iraq.

The Gulf War bore witness to a number of deadly encounters between these two great adversaries. Heavily armoured, highly mobile and capable of killing at over 2500m the M1 Abrams is, to this day, a veritable fighting machine. Superior to both Iraq's Soviet era T-55 and T-62 tanks, nearly all sources claim that no Abrams tank has ever been destroyed by enemy fire. Despite entering service in 1980, the M1 Abrams remained untested in combat until the Gulf War in 1991, where it was to be confronted by its archenemy the Iraqi-assembled Soviet-designed T-72. Entering production in 1971, the T-72 arguably outstripped its contemporaries in a balance of mobility, protection and firepower. By the time of Operation Desert Storm, however, the tables had turned and the tank suffered due to low quality ammunition and poorly trained crews. In this fascinating study, Steven Zaloga pits these two great fighting machines against one another, plotting the development of the Cold War until both tanks met in combat in the deserts of Iraq and Kuwait.

CMH Publication 70-30. Edited by Frank N. Schubert and Theresal. Kraus. Discusses the United States Army's role in the Persian Gulf War from August 1990 to February 1991. Shows the various strands that came together to produce the army of the 1990s and how that army in turn performed under fire and in the glare of world attention. Retains a sense of immediacy in its approach. Contains maps which were carefully researched and compiled as original documents in their own right. Includes an index.

Through hundreds of color photos, the bulk previously unpublished, Images of War: M2 Bradley explores America's premier Infantry Fighting Vehicle in an unprecedented level of detail. Go inside and out the modern-day icon, then ride it into battle through they myriad of photos presented in this book. See why Bradley remains one of the most formidable armored combat vehicles of its class, even as it logs over 35 years of service.The Bradley Fighting Vehicle, made famous through extensive media coverage of the wars in Iraq and Afghanistan, is given an in-depth examination in this brand new volume. Drawing on the lessons learned in Vietnam, the Bradley was built to provide a highly mobile platform from which infantry could be inserted into the battlefield, and from which the infantry could operate. Its use soon expanded to that of a scout vehicle with anti-tank capability. Despite initial criticism from Congress, the Bradley proved itself very capable on the battlefield, destroying more Iraqi armored vehicles than did the famed Abrams tanks. Through extensive photo coverage, most never before published, this book explores the many variations of the Bradley, including the heavily armed M270 Multiple Launch Rocket System.

The Light Armored Vehicle 25 (LAV-25) has played a significant role in transforming United States Marine Corps doctrine since its introduction in the early 1980s. The Marine Corps' Light Armored Vehicle program was based on the proven Swiss MOWAG Piranha series of 4x4, 6x6, and 8x8 wheeled vehicles. However, developing organizational units, tactics, and employment of the weapon system within the force structure of the Marine Corps proved to be more of a challenge than fielding the weapon system. This resulted in multiple re-designations for LAV units within the Corps. The LAV first saw combat in Panama during Operation Just Cause and LAV-25s have fought in every major conflict since, including Operation Enduring Freedom, and Operation Iraqi Freedom. This book covers the design, development, and deployment of this continually successful vehicle.
