Chemistry Lab Book [\$5.50/£3.99]. [Note: this book does NOT support page duplication] Cover: Tough paperback with Periodic Table, Useful Constants, Common Metric Prefixes and Electron Shell Configurations on the back. Binding: Secure professional paperback binding, i.e. it's built to last; pages won't fall out after a few months of use. Dimensions: 20.3 x 25.4 cm (8" x 10"). (Almost the same width as A4 but a few cm shorter in height - just that bit easier to squeeze into a bag.) Interior: - 101 pages of thick white paper (minimizes ink bleed-through), - Grid ruled with thin lines that don't overpower personal notation, - Unit Conversion Tables on the back page. Matching Products: Two other Laboratory Notebooks with the same reference tables and internal content as this one but cover designs more specific to biological and physical sciences. [Search on Amazon for "science" and "bookx" (don't forget the 'x')]. Similar Products: A range of Composition Notebooks suitable for school, college and work. They are the same paper quality and dimensions as this Lab book (8 x 10 inch) but are college ruled internally. Green chemistry involves designing novel ways to create and synthesize products and implement processes that will eliminate or greatly reduce negative environmental impacts. The Green Chemistry Laboratory Manual for General Chemistry provides educational laboratory materials that challenge students with the customary topics found in a general chemistry laboratory manual, while encouraging them to investigate the practice of green chemistry. Following a consistent format, each lab experiment begins with objectives and prelab questions highlighting important issues that must be understood prior to getting started. This is followed by detailed step-by-step procedures for performing the experiments. Students report specific results in sections designated for data, observations, and calculations. Once each experiment is completed, analysis questions test students' comprehension of the results. Additional questions encourage inquiry-based investigations and further research about how green chemistry principles compare with traditional, more hazardous experimental methods. By placing the learned concepts within the larger context of green chemistry principles, the lab manual enables students to see how these principles can be applied to real-world issues. Performing laboratory exercises through green experiments results in a safer learning environment, limits the quantity of hazardous waste generated, and reduces the cost for chemicals and waste disposal. Students using this manual will gain a greater appreciation for green chemistry principles and the possibilities for future use in their chosen careers.

The laboratory course described in the lab manual emphasizes experimental design, data analysis, and problem solving. Inherent in

the design is the emphasis on communication skills, both written and oral. Students work in groups on open-ended projects in which they are given an initial scenario and then asked to investigate a problem. There are no formalized instructions and students must plan and carry out their own investigations.

This new edition of the Beran lab manual emphasizes chemical principles as well as techniques. The manual helps students understand the timing and situations for the various techniques. The Beran lab manual has long been a market leading lab manual for general chemistry. Each experiment is presented with concise objectives, a comprehensive list of techniques, and detailed lab intros and step-by-step procedures.

Fundamentals of Chemistry, Fourth Edition covers the fundamentals of chemistry. The book describes the formation of ionic and covalent bonds; the Lewis theory of bonding; resonance; and the shape of molecules. The book then discusses the theory and some applications of the four kinds of spectroscopy: ultraviolet, infrared, nuclear (proton) magnetic resonance, and mass. Topics that combine environmental significance with descriptive chemistry, including atmospheric pollution from automobile exhaust; the metallurgy of iron and aluminum; corrosion; reactions involving ozone in the upper atmosphere; and the methods of controlling the pollution of air and water, are also considered. Chemists and students taking courses related to chemistry and environmental chemistry will find the book invaluable.

Each experiment in this manual was selected to match topics in your textbook and includes an introduction, a procedure, a page of pre-lab exercises about the concepts the lab illustrates, and a report form. Some have a scenario that places the experiment in a real-
