Bangladesh is by no means a high emitter of carbon, but it is nevertheless one of the countries most critically affected. There is a significant risk of damage to lives and livelihoods due to climate change in the form of cyclones, flooding and storm surges, and slow-onset impacts such as droughts, sea level rises and river basin erosion. Moreover, Bangladeshis are especially vulnerable as a high proportion of people live in extreme poverty. This book assesses the impact of climate change in Bangladesh, and presents the findings of a three-year, in-depth study undertaken at village level in different districts of the country. It examines national policies, contrasting them with what is actually happening at village level. It outlines the impact of climate change on livelihood strategies and health, and focuses

particularly on the impact on gender relations, showing that although women have a significant role to play in helping communities cope with the effects of climate change, cultural customs and practices often work against this. The book argues for, and puts forward policy proposals for, recognising women ' s active contribution and supporting gender equality as a critical strategy in global adaptation to climate challenges.

Markets and Market Failure provides a comprehensive introduction to this important area.

A Short History of Disruptive Journalism Technologies provides a swift analysis of the computerization of the newsroom, from the mid-1960s through to the early 1990s. It focuses on how word processing and a number of related affordances, including mobile-reporting tools, impacted the daily work routines of American news workers. The narrative opens with the development of mainframes and their attendant use as databases in large, daily newspapers, It moves on to the "minicomputer" era and explores initial news-worker experiences with computers for editing and publication. Following this, the book examines the microprocessor era, and the rise of "smart"

terminals, "microcomputers," and off-the-shelf hardware/software, along with the increasing use of computers in smaller news organizations. Mari then turns to the use of pre-internet networks, wire-services and bulletin boards deployed for user interaction. He looks at the integration of decentralized computer networks in newsrooms, with a mix of content-management systems and PCs, and the increasing use of pagers and cellphones for news-gathering, including the shift from "portable" to mobile conceptualizations for these technologies. A Short History of Disruptive Journalism Technologies is an illuminating survey for students and instructors of journalism studies. It represents an important acknowledgement of the impact of pre-internet technological disruptions which led to the even more disruptive internet- and related computing technologies in the latter 1990s and through

Postal service has received considerably less attention in the economics literature than traditional public utilities. Postal service is facing some very important challenges arising out of the increasingly high-tech nature of postal service, the entry of competition into the business, and new attitudes on the part of government to postal service. In the United Kingdom and Germany the increased interest in privatization and recognition of the benefits of competition are likely to have an impact on postal service. These challenges mean that postal managers must learn new ways of

doing business, not just in successfully introducing new hardware and in new internal operating procedures, but also in the development of new pricing and costing methodologies and in the introduction of new management information systems. In order to deal with these new developments managers need a solid foundation in applied microeconomic theory as it relates to postal service. This book encompasses the theoretical foundation for postal policy, particularly with regard to pricing, service quality, and competitive issues.
