A fine memoir by one of America's foremost evolutionary biologists...erudite, elegant, and poetic. E. O. Wilson defines biophilia as 'the innate tendency [in human beings] to focus on life and lifelike process. To an extent still undervalued in philosophy and religion, our existence depends on this propensity, our spirit is woven from it, hopes rise on its currents.'

Biophilia, by E.O. Wilson, is a brilliantly constructed novel exploring the human connection to the natural environment. The term biophilia, coined by Wilson, describes the human affinity for life, which according to Wilson, engenders both a human-to-human connection and a human connection to all other living species.

Commentary on Biophilia by E.O. Wilson | Serendip Studio

In 1984, E.O. Wilson first used the term Biophilia to describe his belief that humans inherently enjoy the diversity of life on earth, and that much of our well being comes from that enjoyment. While a constructive view, it is also a physical fact that our survival as a species depends on preserving biodiversity.

This book brings together the views of some of the most creative scientists of our time, each attempting to amplify and refine the concept of biophilia. Contributors to this volume include Jared Diamond, Aaron Katcher, Richard Nelson and others.

A landmark collected edition of the Pulitzer Prize-winning author and world-renowned biologist, illuminating the marvels of biodiversity in a time of climate crisis and mass extinction. Library of America presents three environmental classics from two-time Pulitzer Prize-winner E. O. Wilson, a masterful writer-scientist whose graceful prose is equal to his groundbreaking discoveries. These books illuminate the evolution and complex beauty of our imperiled ecosystems and the flora, fauna, and civilization they sustain, even as they reveal the personal evolution of one of the greatest scientific minds of our age. Here are the lyrical, thought-provoking essays of *Biophilia*, a field biologist's reflections on the manifold meanings of wilderness. Here too is his magisterial, dazzlingly informative *Diversity of Life*: a sweeping tour of global biodiversity and a prophetic call to preserve the planet, filled on every page with little-known creatures, unique habitats, and fascinating ecological detail. Also included is Wilson's moving autobiography, *Naturalist*. Following him from his outdoor boyhood in Alabama and the Florida panhandle to the rainforests of Surinam and New Guinea--from his first discoveries as a young ant specialist to his emergence as a champion of conservation and rewilding--it rounds out a collection that will inspire wonder, curiosity, and love for a natural world now rapidly disappearing. Thirty-two pages of photographs and numerous illustrations accompany these works, which are introduced by David Quammen, one of America's leading science and nature writers.

Focusing on the interrelationship of wild nature and human nature, a collection of short writings and essays explores "Animal Nature, Human Nature," "The Patterns of Nature," and "Nature's Abundance"

"An audacious and concrete proposal...Half-Earth completes the 86-year-old Wilson's valedictory trilogy on the human animal and our place on the planet."
—Jedediah Purdy, *New Republic* In his most urgent book to date, Pulitzer Prize-winning author and world-renowned biologist Edward O. Wilson states that in order to stave off the mass extinction of species, including our own, we must move swiftly to preserve the biodiversity of our planet. In this "visionary blueprint for saving the planet" (Stephen Greenblatt), *Half-Earth* argues that the situation facing us is too large to be solved piecemeal and proposes a solution commensurate with the magnitude of the problem: dedicate fully half the surface of the Earth to nature. Identifying actual regions of the planet that can still be reclaimed—such as the California redwood forest, the Amazon River basin, and grasslands of the Serengeti, among others—Wilson puts aside the prevailing pessimism of our times and "speaks with a humane eloquence which calls to us all" (Oliver Sacks).

The twenty-first century presents an increasing number of environmental problems, including toxic pollution, global warming, destruction of tropical forests, extinction of biological diversity, and depletion of natural resources. These environmental problems are generally due to human behavior, namely over-consumption of resources and overpopulation. Designing effective policies to address these problems requires a deep understanding of human behavior as well as ecology. This in turn requires considerations of human nature, and the evolutionary "design" of the human mind. Evolutionary research on human behavior has profound implications for the environmental sciences. The aim of this collection is to bring together a variety of chapters that show how and why. Part 1, "Human Nature and Resource Conservation," addresses environmental problems from different evolutionary perspectives. Part 2, "The Ecological Noble Savage Hypothesis," examines the notion that our environmental problems are due to

Western culture, and that our ancestors and people in indigenous societies lived in harmony with nature until the corrupting influences of Western culture. Part 3, "The Tragedy of the Commons," explores the conservation of common-pool or open-access natural resources, such as fisheries, forests, grazing lands, freshwater, and clean air. Part 4, "The Evolution of Discounting and Conspicuous Consumption," looks at the problem of explaining why people are so ecologically short-sighted and why people in developed countries consume so many resources. Part 5, "Overpopulation and Fertility Declines," addresses the evolution of human reproductive decisions. Part 6, "Biophilia," aims to explain why people cherish nature as well as destroy it. The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behavior, and the new interdisciplinary sciences of evolutionary psychology and behavioral ecology. This reader aims to help bridge

A meeting of great minds at the intersection of the arts and sciences

Did you know that spending time in a forest activates the vagus nerve, which is responsible for inducing calm and regeneration? Or that spending just one single day in a wooded area increases the number of natural killer cells in the blood by almost 40 percent on average? We've all had an intuitive sense of the healing power of nature. Clemens G. Arvay's new book brings us the science to verify this power, sharing fascinating research along with teachings and tools for accessing the therapeutic properties of the forest and natural world. Already a bestseller in Germany, *The Biophilia Effect* is a book that transforms our understanding of our interconnection with nature—and shows us how to engage the natural world wherever we live for greater health, inspiration, rejuvenation, and spiritual sustenance.
