The Routledge Handbook of Corpus Linguistics provides a timely overview of a dynamic and rapidly growing area with a widely applied methodology. Through the electronic analysis of large bodies of text, corpus linguistics demonstrates and supports linguistic statements and assumptions. In recent years it has seen an ever-widening application in a variety of fields: computational linguistics, discourse analysis, forensic linguistics, pragmatics and translation studies. Bringing together experts in the key areas of development and change, the handbook is structured around six themes which take the reader through building and designing a corpus to using a corpus to study literature and translation. A comprehensive introduction covers the historical development of the field and its growing influence and application in other areas. Structured around five headings for ease of reference, each contribution includes further reading sections with three to five key texts highlighted and annotated to facilitate further exploration of the topics. The Routledge Handbook of Corpus Linguistics is the ideal resource for advanced undergraduates and postgraduates.

This volume establishes how English language constructs were measured in Cambridge English examinations over the period 1913 to 2012. An addition to the Studies in Language Testing series, this volume provides an overview of English language testing over the last century, with coverage of key theoretical and practical aspects of the assessment of reading, listening, writing and speaking skills. It includes examples of the Cambridge English exams, old and new, and is the first volume to describe in a systematic way the different theoretical influences which have shaped the development of the constructs underlying Cambridge English exams in the last 100 years.

Based on the analysis of a specially compiled corpus of internationally recognized English as a foreign language (EFL) reading tests at different levels of proficiency, this volume explores the relation between the complexity of written texts and the difficulty of reading comprehension tests. It brings together linguistic investigations into the text-inherent complexity of the tests and a study of the data derived from their administration to groups of Italian university students. The study of text complexity draws on corpus linguistics, text linguistics and systemic functional linguistics. Both quantitative and qualitative analyses are carried out on the language used in the reading texts and in the related tasks that make up the corpus of tests. The assessment of test difficulty, on the other hand, is informed by research on language testing, and, in particular, by findings and methodologies of Classical Test Theory and Item Response Theory. Relevant aspects of these theories are used to analyze and interpret both the data obtained from the administration of the tests and the data collected by means of feedback questionnaires completed by test takers. The application of such diverse methodologies and the subsequent comparison of the results of the analyses has brought out interesting correlations between text-inherent complexity, perceived test difficulty and actual test difficulty.

This new Handbook offers a comprehensive overview of current research on private security and military companies, comprising essays by leading scholars from around the world. The increasing privatization of security across the globe has been the subject of much debate and controversy, inciting fears of private warfare and even the collapse of the state. This volume provides the first comprehensive overview of the range of issues raised by contemporary security privatization, offering both a survey of the numerous roles performed by private actors and an analysis of their implications and effects. Ranging from the mundane to the spectacular, from secretive intelligence gathering and neighbourhood surveillance to piracy control and warfare, this Handbook shows how private actors are involved in both domestic and international security provision and governance. It places this involvement in historical perspective, and demonstrates how the impact of security privatization goes well beyond the security field to influence diverse social, economic and political relationships and institutions. Finally, this volume analyses the evolving regulation of the global private security sector. Seeking to overcome the disciplinary boundaries that have plagued the study of private security, the Handbook promotes an interdisciplinary approach and contains contributions from a range of disciplines, including international relations, politics, criminology, law, sociology, geography and anthropology. This book will be of much interest to students of private security companies, global governance, military studies, security studies and IR in general.

Test developers need to provide a clear explication of the language ability constructs that underpin the tests they offer in the public domain; such an explication is essential for supporting claims about the validity --- or usefulness --- of tests and test scores. This edited volume develops a theoretical framework for validating tests of second language speaking ability. The framework is then applied through an examination of the tasks in Cambridge ESOL speaking tests from a number of different validity perspectives that reflect the socio-cognitive nature of any assessment event. The chapter authors show how an understanding and analysis of the framework and its components can assist test developers to operationalise their tests more effectively, especially in relation to the key criteria that differentiate one proficiency level from another. The volume is a rich source of information on all aspects of examining speaking ability. As such, it will be of considerable interest to examination boards who wish to validate their own speaking tests in a systematic and coherent manner, as well as to academic researchers and graduate students in the field of language assessment more generally. This is a companion volume to the previously published titles Examining Writing and Examining Reading.
