 Financial derivatives, as mentioned above, are contracts that base their value on an underlying asset. In them, the seller of the contract does not necessarily have to own the asset, but can give the necessary money to the buyer for it to acquire it or give the buyer another derivative contract.

What are financial derivatives? Definition, types and ...
 From the economic point of view, financial derivatives are cash flows that are conditioned stochastically and discounted to present value. The market risk inherent in the underlying asset is attached to the financial derivative through contractual agreements and hence can be traded separately. The underlying asset does not have to be acquired.

This work investigates the material culture of public temperatures in New York City. Numbers like temperature, while ubiquitous and indispensable to capitalized social relations, are often hidden away within urban infrastructures evading attention. This Archaeology of Temperature brings such numbers to light, interrogating how we construct them and how they construct us. Building on discussions in contemporary archaeology this book challenges the border between material and discursive culture, advocating for a novel conception of capitalism's artifacts. The artifacts examined within (temperatures) are instantaneous electric pulses, algorithmic outputs, and momentary fluctuations in mercury. The artifacts of the capitalized never sit still, operating at subatomic and solar scales. Temperatures, as numerical materials precariously straddling the colonially constructed nature-culture divide, exemplify the abstraction necessary to pursue the perpetually accelerating asymmetrical growth of wealth-a pursuit that engenders multiple environmental and economic calamities. An Archaeology of Temperature innovatively reimagines theory and method within contemporary archaeology. Equally, in plummeting the depths of temperature, this book offers indispensable contributions to science studies, urban geography, semiotics, the philosophy of materiality, the history of thermodynamics, heterodox economics, performative scholarship, and queer ecocriticism.

The coronavirus (COVID-19) crisis, which has hit financial systems across Africa, is likely to deteriorate banks' balance sheets. The largest threat to banks pertains to their loan portfolios, since many borrowers have faced a sharp collapse in their income, and therefore have difficulty repaying their obligations as they come due. This could lead to a sharp increase in nonperforming loans (NPLs) in the short to medium term.
