A commemorative history of fifty years of the iconic Ford Transit van, from the launch of the first-generation Transit in 1965, right up to the present day. Covering the full range of Transit models and with over three hundred photographs (including previously unpublished pictures from Ford's picture archive), Ford Transit - Fifty Years is an ideal resource for anyone with an interest in this world-beating commercial vehicle. Written by acknowledged Ford Transit expert Peter Lee, the book covers the development era, light commercial vehicles in the 1950s, the 'Project Redcap' prototypes and the first Transit. It goes on to describe the production and development of all eight generations and variants of Transits, including custom vans, camper vans, minibuses and special vehicle options. Specification guides, awards, and sales figures are all included as well as marketing worldwide. Finally, there are interviews with designers, engineers and Ford employees, along with owners' experiences. The Transit has and continues to receive numerous awards, voted 'International Van of the Year' in 2001 and 2013, and with the 2014 launch of the all-new two-tonne Transit and its pioneering technology, this looks to be only the first fifty years of the Ford Transit story. Fully illustrated with 200 colour and 100 black & white photographs, many previously unseen from Ford's archives.

This engaging book follows the history of the Lotus 2 + 2 coupes from the Elan through to the Evora.

Volume 2 of the two-volume set Advanced direct injection combustion engine technologies and development investigates diesel DI combustion engines, which despite their commercial success are facing ever more stringent emission legislation worldwide. Direct injection diesel engines are generally more efficient and cleaner than indirect injection engines and as fuel prices continue to rise DI engines are expected to gain in popularity for automotive applications. Two exclusive sections examine light-duty and heavy-duty diesel engines. Fuel injection systems and after treatment systems for DI diesel engines are discussed. The final section addresses exhaust emission control strategies, including combustion diagnostics and modelling, drawing on reputable diesel combustion system research and development. Investigates how HSDI and DI engines can meet ever more stringent emission legislation Examines technologies for both light-duty and heavy-duty diesel engines Discusses exhaust emission control strategies, combustion diagnostics and modelling
