The Global Pension Assets Study covers 22 major pension markets (the P22), which now totals US\$46,734 billion in pension assets and account for 62% of the GDP of these economies. The study includes an analysis of the seven largest markets (the P7) which includes Australia, Canada, Japan, Netherlands, Switzerland, UK and US and comprises 92% of total pension assets.

In 1995, TAC commissioned an Inter-Centre Review of Root and Tuber Crops Research in the CGIAR, and that group's final report was submitted in April 1996. Among its findings, the review recommended that the Centers working on these crops prepare, in consultation with non-CGIAR members, "a comprehensive, documented text that sets out a vision for root and tuber research employing inter-Centre collaborations and institutional partnerships ... "(TAC, 1997). At International Centers' Week 1996, representatives of CIAT, CIP, IFPRI, IPGRI, and IITA met, formed an informal committee, and established a task force to

prepare such a report, with CIP and CIAT representatives acting as co-convenors. This document synthesizes the principal findings of the subsequent work. Roots and tuber crops have myriad and complex roles to play in feeding the world in the coming decades. Far from being one sort of crop that serves one specific purpose, they will be many things to many-very many-people.

Arising from recent developments at the international level, many developing countries, indigenous peoples and local communities are considering using geographical indications (GIs) to protect traditional knowledge, and to promote trade and overall economic development. Despite the considerable enthusiasm over GIs in diverse quarters, there is an appreciable lack of research on how far and in what context GIs can be used as a protection model for traditional knowledge-based resources. This book critically examines the potential uses of geographical indications as models for protecting traditional knowledge-based products and resources in national and international intellectual property legal frameworks. By analysing the reception towards GIs from developing countries and advocates of development in the various legal and non-legal regimes (including the World Trade Organization, World Intellectual Property Organization, and the Convention on Biological Diversity and the Food and Agricultural Organization), the book evaluates the development potential of GIs in relation to ensuing changes in international intellectual property law in accommodating traditional knowledge. Teshager W. Dagne argues for a degree of balance in the approach to the implementation of global intellectual property rights in a manner that gives developing countries an opportunity to protect traditional knowledge-based products. The book will be of great interest and use to scholars and students of intellectual property law, public international law, traditional knowledge, and global governance.

Against the background of fast expanding trade and a surge in food import bills, which has come to characterise much of developments shaping global food markets in 2020/21, early forecasts for 2021/22 point to resilient food trade and a continuation of strong international prices amidst many supply and demand uncertainties. This report provides supply and demand forecasts for basic foodstuffs, fish and fishery products along with price analysis and policy information. The report 's special feature of this report puts recent trends in global food trade under the spotlight, with particular focus on how commodity flows have measured-up during the COVID-19 pandemic. Contrary to widespread predictions of a collapse in global markets, recent data show that trade continues to reach new heights. A novel metric is introduced that better captures the price momentum underway in international markets. Food Outlook is published by the Markets and Trade Division of FAO as part of the Global Information and Early Warning System (GIEWS). It is a biannual publication (November and June) focusing on developments in global food markets. Food Outlook maintains a close synergy with another major GIEWS publication, Crop Prospects and Food Situation, especially with regard to the coverage of cereals. Food Outlook is available in English. The summary section is also available in Arabic, Chinese, French, Russian and Spanish

The world's demand for food is expected to double within the next 50 years, while the natural resources that sustain agriculture will become increasingly scarce, degraded, and vulnerable to the effects of climate change. In many poor countries, agriculture accounts for at least 40 percent of GDP and 80 percent of employment. At the same time, about 70 percent of the world's poor live in rural areas and most depend on agriculture for their livelihoods. 'World Development Report 2008' seeks to assess where, when, and how agriculture can be an effective instrument for economic development, especially development that favors the poor. It examines several broad questions: How has agriculture changed in developing countries in the past 20 years? What are the important new challenges and opportunities for agriculture? Which new sources of agricultural growth can be captured cost effectively in particular in poor countries with large agricultural sectors as in Africa? How can agricultural growth be made more effective for poverty reduction? How can governments facilitate the transition of large populations

out of agriculture, without simply transferring the burden of rural poverty to urban areas? How can the natural resource endowment for agriculture be protected? How can agriculture's negative environmental effects be contained? This year's report marks the 30th year the World Bank has been publishing the 'World Development Report'.

Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

Over the last few decades, the new discipline of sustainability science (SS) has evolved with a phenomenal rise in knowledge production, research, and publications, as well as the development of new academic programs and creation of centers and scientific communities, networks, and organizations. With pressing global environmental issues in the 21st century, SS has become an influential discipline and important subject of intellectual inquiry that deserves support from the academy and scientific communities worldwide to find solutions to global problems such as climate change, environmental degradation, and biodiversity loss. Intellectual, Scientific, and Educational Influences on Sustainability Research is a concise and authoritative book that fills the crucial and unmet need for educational materials that integrates theoretical foundations, methodological basis, and practice in the science of sustainability. The goal of the book is to increase accessibility and use of educational and scientific knowledge among academic and non-academic audiences as it assembles the wisdom and insights from up-to-date scholarship and advances in this new discipline. Highlighting various topics such as biodiversity, public transportation, and human development, it is ideal for environmentalists, ecologists, technology developers, policymakers, academicians, researchers, and students.

Sustainable Production Consumption Systems brings together a set of designed case studies intended to provide a more in-depth understanding of challenges and opportunities in bringing knowledge and actions closer together for the sustainable management of specific production and consumption systems. The case study approach enabled researchers to engage directly with some of the actors involved in the production, consumption or regulation of specific goods or services and other stakeholders affected by those processes. Such engagement was particularly worthwhile when it helped mobilize actors to pursue linking knowledge with action in ways that improve the prospects for sustainability.

The Multi-dimensional Review of C ô te d'Ivoire aims to support the crafting of a development strategy for C ô te d'Ivoire to reach emergence, the status of emergent economy, in 2020.
