'Watching the president's Christmas message produces this necropolar, white-mass sensation. Seeing the video broadcast of the Christmas service in the cathedral itself, with these pathetic screens and the young worshippers slumped around them here and there, you tell yourself that God and religion deserved better. Deserved to die, yes, but not this. However, watching the presidential figure and his sonorous inanity, you tell yourself that here at least you got what you deserved. Chirac is useless – that goes without saying – but so are we all ... Uselessness of this kind has no origin: it exists immediately, reciprocally; like a shared secret, you savour it implicitly – with its warm bitterness – particularly in these cold snaps, as the very essence of the social bond. Sanctioned by that other interactive uselessness – the uselessness of the

screen.' World-renowned for his lively and often iconoclastic reading of contemporary culture and thought, Jean Baudrillard here turns his hand to topical political debates and issues. In this stimulating collection of journalistic essays Baudrillard addresses subjects ranging from those already established as his trademark (virtual reality, Disney, television) to more unusual topics such as the Western intervention in Bosnia, children's rights, Holocaust revisionism, AIDS, the Rushdie fatwa, Formula One racing, mad cow disease, genetic cloning, and the uselessness of Chirac. These are coruscating and intriguing articles, not least because they show that Baudrillard is – pace his critics – still susceptible and alert to influences from social movements and the world beyond the hyperreal.

Diagnostics, or fault finding, is a fundamental part of an automotive technician's work, and as automotive systems become increasingly complex there is a greater need for good diagnostic skills. *Advanced Automotive Fault Diagnosis* is the only book to treat automotive diagnostics as a science rather than a check-list procedure. Each chapter includes basic principles and examples of a vehicle system followed by the appropriate diagnostic techniques, complete with useful diagrams, flow charts, case studies and self-assessment questions. The book will help new students develop diagnostic skills and help experienced technicians improve even further. This new edition is fully updated to the latest technological developments. Two new chapters have been added – On-board diagnostics and Oscilloscope diagnostics – and the coverage has been matched to the latest curricula of motor vehicle qualifications, including: IMI and C&G Technical Certificates and NVQs; Level 4 diagnostic units; BTEC National and Higher National qualifications from Edexcel; International Motor Vehicle qualifications such as C&G 3905; and

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes
