The exodus of rural dwellers for the cramped, smoke-filled, but affluent cities of the late nineteenth century took place because of an increasing number of factory jobs. And such jobs came about because of a radical shift in technology and society called the Industrial Revolution. From steam power to electrical grids, the innovations that fueled this revolution transformed the United States into a country that would later dominate the world in business, culture, and invention. Extensive focus on documents, period photographs, and artwork combined with context-setting text makes this an authoritative guide to one of the most important eras of American history.

From noted historian Peter N. Stearns, a concise, accessible examination of the industrial revolution through the twenty-first century, investigating the cause and effect of this global phenomenon
The first volume of *The Cambridge History of Capitalism* provides a comprehensive account of the evolution of capitalism from its earliest beginnings. Starting with its distant origins in ancient Babylon, successive chapters trace progression up to the 'Promised Land' of capitalism in America. Adopting a wide geographical coverage and comparative perspective, the international team of authors discuss the contributions of Greek, Roman, and Asian civilizations to the development of capitalism, as well as the Chinese, Indian and Arab empires. They determine what features of modern capitalism were present at each time and place, and why the various precursors of capitalism did not survive. Looking at the eventual success of medieval Europe and the examples of city-states in northern Italy and the Low Countries, the authors address how British mercantilism led to European imitations and American successes, and ultimately, how capitalism became global.

"In *A History of Population Health* Johan P. Mackenbach offers a broad-sweeping study of the spectacular changes in people's health in Europe since the early 18th century. Most of the 40 specific diseases covered in this book show a fascinating pattern of 'rise-and-fall', with large differences in timing between countries. Using a unique collection of historical data and bringing together insights from demography, economics, sociology, political science, medicine, epidemiology and general history, it shows that these changes and variations did not occur spontaneously, but were mostly man-made. Throughout European history, changes in health and longevity were therefore closely related to economic, social, and political conditions, with public health and medical care both making important contributions to population health improvement"

"Dupont's study is a valuable contribution. Also, adopting an approach of interdisciplinarity and using qualitative information amply, this study presents a rich enquiry into the interworking of regional urbanisation and industrialisation processes, themes usually studied separately by scholars." --*The Journal of Entrepreneurship* "A unique study!?"4. This is an excellent volume giving a new perspective especially at a time when the new economic policy of liberalisation is being implemented. It is hoped the book will be read with interest not only by the students and teachers but also by policy makers, planners and scholars of eminence, particularly those interested in urban development and urban policy. The author deserves our best compliments for her brilliant and timely contribution." --Nagarok "The book is a welcome addition to the slender literature on the theme of small and medium towns." --*Deccan Herald* "An exceptional study on the implications of the rural-urban shift and the role of medium-sized towns in the development of regions. . . . The study is painstakingly detailed, elaborate, and thorough. . . . Systematic categorization and topical presentation make it a mine-house of information." --*Business Line* Town and country planners in developing countries have long struggled with the problems of achieving a balanced pattern of urban settlements, particularly, through decentralizing industrial development. These objectives in turn engendered a focus on the potential role that small and medium-sized towns can play in regional and national development. It is in this framework that Veronique Dupont has undertaken a detailed study of the dynamics of a middle-sized industrial town in India and its relationship with the surrounding rural hinterland. Based on this study, the author evaluates the pull effects of labor markets, patterns of socioeconomic integration in the urban context, and the contribution that migrants make to urban growth and industrial development--both from a demographic and economic perspective. Soudly based on quantitative and qualitative survey at the primary level, this book deals with a wide range of crucial issues related to both urbanization and industrialization. As such, it will interest urban planners, demographers, sociologists, and economists.

This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021. Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.
