Originally published in 2003, reissued as part of Pearson's modern classic series.

The book Complex Analysis through Examples and Exercises has come out from the lectures and exercises that the author held mostly for mathematician and physicists . The book is an attempt to present the rather involved subject of complex analysis through an active approach by the reader. Thus this book is a complex combination of theory and examples. Complex analysis is involved in all branches of mathematics. It often happens that the complex analysis is the shortest path for solving a problem in real circum stances. We are using the (Cauchy) integral approach and the (Weierstrass) power series approach . In the theory of complex analysis, on the hand one has an interplay of several mathematical disciplines, while on the other various methods, tools, and approaches. In view of that, the exposition of new notions and methods in our book is taken step by step. A minimal amount of expository theory is included at the beginning of each section, the Preliminaries, with maximum effort placed on well selected examples and exercises capturing the essence of the material. Actually, I have divided the problems into two classes called Examples and Exercises (some of them often also contain proofs of the statements from the Preliminaries). The examples contain complete solutions and serve as a model for solving similar problems given in the exercises. The readers are left to find the solution in the exercises; the answers, and, occasionally, some hints, are still given.

This book deals with two important branches of mathematics, namely, logic and set theory. Logic and set theory are closely related and play very crucial roles in the foundation of mathematics, and together produce several results in all of mathematics. The topics of logic and set theory are required in many areas of physical sciences, engineering, and technology. The book offers solved examples and exercises, and provides reasonable details to each topic discussed, for easy understanding. The book is designed for readers from various disciplines where mathematical logic and set theory play a crucial role. The book will be of interest to students and instructors in engineering, mathematics, computer science, and technology.

This textbook is intended for a one semester course in complex analysis for upper level undergraduates in mathematics. Applications, primary motivations for this text, are presented hand-in-hand with theory enabling this text to serve well in courses for students in engineering or applied sciences. The overall aim in designing this text is to accommodate students of different mathematical backgrounds and to achieve a balance between presentations of rigorous mathematical proofs and applications. The text is adapted to enable maximum flexibility to instructors and to students who may also choose to progress through the material outside of coursework. Detailed examples may be covered in one course, giving the instructor the option to choose those that are best suited for discussion. Examples showcase a variety of problems with completely worked out solutions, assisting students in working through the exercises. The numerous exercises vary in difficulty from simple applications of formulas to more advanced project-type problems. Detailed hints accompany the more challenging problems. Multi-part exercises may be assigned to individual students, to groups as projects, or serve as further illustrations for the instructor. Widely used graphics clarify both concrete and abstract concepts, helping students visualize the proofs of many results. Freely accessible solutions to every-other-odd exercise are posted to the book's Springer website. Additional solutions for instructors' use may be obtained by contacting the authors directly.

Bringing together Islamic studies, a postcolonial literary perspective, and a focus on the interaction between aesthetics and politics, this book analyses Iqbal's Islamism through his poetry. It argues that his notion of an Islamist selfhood was expressed in his verse through the interplay between poetic tradition and creative innovation. It also considers how Iqbal expressed an Islamist geopolitical imagination in his work, and examines his exploration of the relationship between the modern West and a reconstructed Islam. For the first time, Iqbal's personal letters have been drawn upon to provide an insight into his inner conflicts as articulated in his poetry. Concentrating on the complexity of his work in its own right, the book eschews the standard appropriation of Iqbal into any one political agenda — be it Indian nationalism, Muslim separatism or Iranian Islamic republicanism. With its analytical and in-depth reading of Iqbal's verse and prose, this book opens a fresh perspective on Islam and postcolonialism. It will be a fascinating study for general readers and readers with interests in the intellectual and political history of modern South Asia, colonialism and postcolonialism, Islamic studies, and modern South Asian literature (especially Urdu and Persian poetry).

The new Second Edition of A First Course in Complex Analysis with Applications is a truly accessible introduction to the fundamental principles and applications of complex analysis. Designed for the undergraduate student with a calculus background but no prior experience with complex variables, this text discusses theory of the most relevant mathematical topics in a student-friendly manor. With Zill's clear and straightforward writing style, concepts are introduced through numerous examples and clear illustrations. Students are guided and supported through numerous proofs providing them with a higher level of mathematical insight and maturity. Each chapter contains a separate section on the applications of complex variables, providing students with the opportunity to develop a practical and clear understanding of complex analysis.

Covering the origins, key features, and legacy of the Islamic tradition, the third edition of A New Introduction to Islam includes new material on Islam in the 21st century and discussions of the impact of historical ideas, literature, and movements on contemporary trends. Includes updated and rewritten chapters on the Qur'an and hadith literature that covers important new academic research Compares the practice of Islam in different Islamic countries, as well as acknowledging the differences within Islam as practiced in Europe Features study questions for each chapter and more illustrative material, charts, and excerpts from primary sources

A comprehensive text, combining all important concepts and topics of Electrical Machines and featuring exhaustive simulation models based on MATLAB/Simulink Electrical Machine Fundamentals with Numerical Simulation using MATLAB/Simulink provides readers with a basic understanding of all key concepts related to electrical machines (including working principles, equivalent circuit, and analysis). It elaborates the fundamentals and offers numerical problems for students to work through. Uniquely, this text includes simulation models of every type of machine described in the book, enabling students to design and analyse machines on their own. Unlike other books on the subject, this book meets all the needs of students in electrical machine courses. It balances analytical treatment, physical explanation, and hands-on examples and models with a range of difficulty levels. The authors present complex ideas in simple, easy-to-understand language, allowing students in all engineering disciplines to build a solid foundation in the principles of electrical machines. This book: Includes clear elaboration of fundamental concepts in the area of electrical machines, using simple language for optimal and enhanced learning Provides wide coverage of topics, aligning with the electrical machines syllabi of most international universities Contains extensive numerical problems and offers MATLAB/Simulink simulation models for the covered machine types Describes MATLAB/Simulink modelling procedure and introduces the modelling environment to novices Covers magnetic circuits, transformers, rotating machines, DC machines, electric vehicle motors, multiphase machine concept, winding design and details, finite element analysis, and more Electrical Machine Fundamentals with Numerical Simulation using MATLAB/Simulink is a well-balanced textbook perfect for undergraduate students in all engineering majors. Additionally, its comprehensive treatment of electrical machines makes it suitable as a reference for researchers in the field.

English Summary: This book is a research on the Persian poetry of Muhammad Iqbal, whom Pakistan chose as its national poet. It specifies the position of these poems between tradition and modernity as well as the appeal of these poems to Iqbal's contemporaries. Based on structural text analysis, aesthetics of reception and the semiotics of Umberto Eco, it proves that the message of the poems in Message of the East and Persian Psalms is clearly romantic. This romanticism is an adaption of national romanticism and can be named a pan-islamic romanticism of power as opposed to nature romanticism. The traditional forms of the poems turn out to be mere tools to render this message plausible. Using traditional rhetorics in order to convey a thoroughly modern content, Iqbal succeeded in attaching the muslims of India to the discourses of panislamism and self-governance and in motivating them for joining India's independence movement. German Description: Dieses Buch untersucht die Position der persischen Lyrik des pakistanischen Nationaldichters Muhammad Iqbal zwischen Tradition und Moderne und versucht, die Wirkungsweise dieser Gedichte darzustellen. Es legt auf der Basis von strukturalistischer Textanalyse, Rezeptionsasthetik und Umberto Ecos Semiotik dar, dass die Botschaft der beiden Gedichtbände Botschaft des Ostens und Persischer Psalter sehr eindeutig nationalromantisch (genauer umma-romantisch) ist und die traditionellen Formen nur dazu dienen, diese Botschaft dem indisch-islamischen Leser plausibel zu machen. Mit dieser Poesie hat Iqbal die Muslime Indiens an die Diskurse des Panislamismus und der Selbstbestimmung angeschlossen und sie zur Mitarbeit an der Unabhängigkeit Indiens motiviert.
