Masters of the Planet is a stunning culmination of a career in science: a brilliant and engaging account that illuminates and inspires. Read Tattersall and you will not see yourself, let alone our entire species, in the same way again. " Neil Shubin, author of Your Inner Fish

Amazon.com: Masters of the Planet: The Search for Our ...

Ian Tattersall's new book, Masters of the Planet, is an eloquently and well-written story of our human origins. While much of the material included in this book was familiar to me, I have to say that Dr. Tattersall's organization and presentation makes this book the perfect gift for someone looking for a thorough but easily understandable first exposure to human evolution.

The Copernicus Masters is an international competition that awards prizes to developers who leverage Earth observation data to solve important commercial and social problems. We issued a call for submissions to the Planet See Change, Change the World Challenge.

IMARA Wins 2020 Planet Copernicus Masters Challenge

Edition Description. "When homo sapiens made their entrance 100,000 years ago they were confronted by a wide range of other early humans--homo erectus, who walked better and used fire; homo habilis who used tools; and of course the Neanderthals, who were brawny and strong. But shortly after their arrival, something happened that vaulted the species forward and made them the indisputable masters of the planet.

Book Summary. When homo sapiens made their entrance 100,000 years ago they were confronted by a wide range of other early humans - homo erectus, who walked better and used fire; homo habilis who used tools; and of course the Neanderthals, who were brawny and strong. But shortly after their arrival, something happened that vaulted the species forward and made them the indisputable masters of the planet.

Summary and reviews of Masters of the Planet by Ian Tattersall

But shortly after their arrival, something happened that vaulted the species forward and made them the indisputable masters of the planet. This book is devoted to revealing just what that difference is. It explores how the physical traits and cognitive ability of homo sapiens distanced them from the rest of nature.

An award-winning Museum of Natural History curator and author of Becoming Human traces the evolution of homo sapiens to demonstrate how they prevailed among other early humans because of their unique cognitive ability, in an account that also explains how their superior mental abilities were acquired. 40,000 first printing.

50,000 years ago – merely a blip in evolutionary time – our Homo sapiens ancestors were competing for existence with several other human species, just as their own precursors had been doing for millions of years. Yet something about our species separated it from the pack, and led to its survival while the rest became extinct. So just what was it that allowed Homo sapiens to become Masters of the Planet? Curator Emeritus at the American Museum of Natural History, Ian Tattersall takes us deep into the fossil record to uncover what made humans so special. Surveying a vast field from initial

bipedality to language and intelligence, Tattersall argues that Homo sapiens acquired a winning combination of traits that was not the result of long term evolutionary refinement. Instead it emerged quickly, shocking their world and changing it forever.

Fifty thousand years ago—merely a blip in evolutionary time—our Homo sapiens ancestors were competing for existence with several other human species, just as their precursors had done for millions of years. Yet something about our species distinguished it from the pack, and ultimately led to its survival while the rest became extinct. Just what was it that allowed Homo sapiens to become masters of the planet? Ian Tattersall, curator emeritus at the American Museum of Natural History, takes us deep into the fossil record to uncover what made humans so special. Surveying a vast field from initial bipedality to language and intelligence, Tattersall argues that Homo sapiens acquired a winning combination of traits that was not the result of long-term evolutionary refinement. Instead, the final result emerged quickly, shocking our world and changing it forever.

"The Master of the World" by Jules Verne. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten - or yet undiscovered gems - of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

In *The Fossil Trail*, Ian Tattersall, the head of the Anthropology Department at the American Museum of Natural History, takes us on a sweeping tour of the study of human evolution, offering a colorful history of fossil discoveries and a revealing insider's look at how these finds have been interpreted - and misinterpreted - through time. All the major figures and discoveries are here. We meet Lamarck and Cuvier and Darwin (we learn that Darwin's theory of evolution, though a bombshell, was very congenial to a Victorian ethos of progress), right up to modern theorists such as Niles Eldredge and Stephen Jay Gould.

Laboratory Earth taps the relevant knowledge from physical, biological, and social sciences needed to study the planet holistically. This so-called Earth Systems Science fosters a new way to understand the Earth and our roles as inhabitants, with the purpose of building solutions to the bewildering global environment and overdevelopment. Educational, business, health, and governmental organizations often dissect the world into narrow but highly specialized disciplines—economics, ecology, cardiology, meteorology, glaciology, or political science, to name a few. But real world problems, like urban sprawl, public health, poverty, toxic waste, economic development, the ozone hole, or global warming, do not fit neatly into disciplinary boxes. However, author Stephen Schneider asserts that these contemporary issues must be viewed as systems of interconnected subelements. This is especially true for global environmental problems, since they arise from increasing numbers of people demanding higher standards of living and willing to use the cheapest available technologies to pursue these growth-oriented goals, even if the unintended byproducts include land degradation, toxic pollutants, species extinctions, or global climate change. To first understand and then solve such problems, we must learn to view the Earth and our socioeconomic engine as one integrated system. Schneider, who in the 1970s predicted global warming would become “demonstrable” by the turn of the century, chooses that debate to illustrate how this twenty-first century Earth Systems Science approach works, introducing us to the sharp controversies and highly visible debates among climatologists, ecologists, economists, industrialists, and political interests over the seriousness and solutions to the climate change crisis. He begins with a fascinating journey to the beginning of geologic time on Earth and traces from there the coevolution of climate and life over the next four billion years. Along the way we learn about the Gaia Hypothesis, the demise of the dinosaurs, and the likelihood of an impending ice age. Schneider traces our climatic history not only from the beginning and up to the twentieth century, but deep into the twenty-first as well. He depicts the next one hundred years as a potentially perilous period for climate and life—unless we citizens of Earth recognize and then work to control the unintended global scale experiment we are foisting on ourselves and all other life on “Laboratory Earth.” This “lab” is not built of glass, wires, and tubes, but of insects, soils, air, oceans, birds, trees, and people. While no honest scientist can claim to have clairvoyant vision into the twenty-first century, Schneider optimistically demonstrates that enough is already known to command our attention and to insure that the juggernaut of human impacts on Earth doesn't turn into a gamble we can't afford to lose.

From an Aurora Award-winning author comes the second book in a gripping portal fantasy series in which one woman's powers open the way to a labyrinth of new dimensions. Shawna Keys has fled the world she only recently discovered she Shaped, narrowly escaping death at the hands of the Adversary who seized control of it...and losing her only guide, Karl Yatsar, in the process. Now she finds herself alone in some other Shaper's world, where, in her first two hours, she's rescued from a disintegrating island by an improbable flying machine she recognizes from Jules Verne's *Robur the Conqueror*, then seized from it by raiders flying tiny personal helicopters, and finally taken to a submarine that bears a strong resemblance to Captain Nemo's *Nautilus*. Oh, and accused of being both a spy and a witch. Shawna expects--hopes!--Karl Yatsar will eventually follow her into this new steampunky realm, but exactly where and when he'll show up, she hasn't a clue. In the meantime, she has to navigate a world where two factions fanatically devoted to their respective leaders are locked in perpetual combat, figure out who the Shaper of the world is, find him or her, and obtain the secret knowledge of this world's Shaping. Then she has to somehow reconnect with Karl Yatsar, and escape to the next Shaped world in the Labyrinth...through a Portal she has no idea how to open.

The New York Times bestselling *Dragon Masters* series is "How to Train Your Dragon" meets the Dragon Slayers' Academy, and it's perfect for newly independent readers!

SALTZMAN/OLD MASTERS; NEW WORLD

Living on a world as vast as Earth, it can be easy to forget that our planet is just a tiny speck in a massive universe filled with planets, moons, stars, asteroids, comets, dark matter, and maybe even alien life! In this book, readers in grades 4-9 will learn about Earth's place in the Milky Way and the larger universe, and how humans are learning about the endless frontier of space. This series features a variety of science topics aligned to NGSS standards. From mixing matter to the study of sound waves, each informative book includes a glossary, comprehension questions, and an activity for home or the classroom.
