sophisticated modern

telecommunication systems.

Optical-fiber-based

telecommunication networks

have become a major information-transmission-system,

with high capacity links

encircling the globe in both

terrestrial and undersea  
installations. Numerous  
passive and active optical  
devices within these links  
perform complex transmission  
and networking functions in  
the optical domain, such as  
signal amplification,

high-capacity networks.

This book highlights the  
fundamental principles of  
optical fiber technology  
required for understanding

lightwave telecommunication networks.  
Such networks have become an  
indispensable part of  
society with applications  
ranging from simple web  
browsing to critical  
healthcare diagnosis and  
cloud computing. Since users

expect these services to  
always be available, careful  
engineering is required in  
all technologies ranging  
from component development  
to network operations. To  
achieve this understanding,  
this book first presents a
