Introductory Statistics is designed for the one-semester, introduction to statistics course and is geared toward students majoring in fields other than math or engineering. This text assumes students have been exposed to intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them. Coverage and Scope Chapter 1 Sampling and Data Chapter 2 Descriptive Statistics Chapter 3 Probability Topics Chapter 4 Discrete Random Variables Chapter 5 Continuous Random Variables Chapter 6 The Normal Distribution Chapter 7 The Central Limit Theorem Chapter 8 Confidence Intervals Chapter 9 Hypothesis Testing with One Sample Chapter 10 Hypothesis Testing with Two Samples Chapter 11 The Chi-Square Distribution Chapter 12 Linear Regression and Correlation Chapter 13 F Distribution and One-Way ANOVA

Accounting: What the Numbers Mean, 6e, by Marshall/McManus/Viele is written to meet the needs of those students who will not be accountants but who do need to understand accounting, the language of business, in order to effectively participate in activities such as planning, control, and decision-making. Marshall takes readers through the basics: what accounting information is, what it means, and how it is used. In using this text, students examine financial statements and discover what they do and do not communicate. This enables them to gain the crucial decision-making and problem-solving skills they need in order to succeed in a professional environment.

It is 1939 and although Australia is about to go to war, it doesn't quite realise yet that the situation is serious. Deep in the working-class Melbourne suburb of Richmond it is business—your own and everyone else's—as usual. And young Kip Westaway, failed scholar and stablehand, is living the most important day of his life.

We live in a data-driven world, and the goal of this Canadian text is to teach students how to access and analyze these data critically. Canadian authors Jim Stallard and Michelle Boué emphasize that learning statistics extends beyond the classroom to an essential life skill, and want Canadian students to develop a "data habit of mind." Regardless of their math backgrounds, students will learn how to think about data and how to reason using data. With a clear, unthreatening writing style and carefully chosen pedagogy, this text makes data analysis accessible to all students. KEY TOPICS: Introduction to Data; Picturing Variation with Graphs; Numerical Summaries of Centre and Variation; Regression Analysis: Exploring Associations between Variables; Modelling Variation with Probability; Modeling Random Events: The Normal and Binomial Models; Survey Sampling and Inference; Hypothesis Testing for Population Proportions; Inferring Population Means; Associations between Categorical Variables; Multiple Comparisons and Analysis of Variance; Experimental Design: Controlling Variation; Inference without Normality; Inference for Regression MARKET: A textbook suitable for all introductory statistics courses

The basis for the cult-classic film *The Warriors* chronicles one New York City gang's nocturnal journey through the seedy, dangerous subways and city streets of the 1960s. Every gang in the city meets on a sweltering July 4 night in a Bronx park for a peace rally. The crowd of miscreants turns violent after a prominent gang leader is killed and chaos prevails over the attempt at order. *The Warriors* follows the Dominators making their way back to their home territory without being killed. The police are prowling the city in search of anyone involved in the mayhem. An exhilarating novel that examines New York City teenagers, left behind by society, who form identity and personal strength through their affiliation with their "family," *The Warriors* weaves together social commentary with ancient legends for a classic coming-of-age tale. This edition includes a new introduction by the author.

This book is entirely up to date to reflect recent changes in technology and AIS practice. Covers such subjects as EDI, reengineering, neural networks, client/server, computer security, and events accounting.

An irresistible story from Kasie West that explores the timeless question *What do you do when you fall for the person you least expect?* When Autumn Collins finds herself accidentally locked in the library for an entire weekend, she doesn't think things could get any worse. But that's before she realizes that Dax Miller is locked in with her. Autumn doesn't know much about Dax except that he's trouble. Between the rumors about the fight he was in (and that brief stint in juvie that followed it) and his reputation as a loner, he's not exactly the ideal person to be stuck with. Still, she just keeps reminding herself that it is only a matter of time before Jeff, her almost-boyfriend, realizes he left her in the library and comes to rescue her. Only he doesn't come. No one does. Instead it becomes clear that Autumn is going to have to spend the next couple of days living off vending-machine food and making conversation with a boy who clearly wants nothing to do with her. Except there is more to Dax than meets the eye. As he and Autumn at first grudgingly, and then not so grudgingly, open up to each other, Autumn is struck by their surprising connection. But can their feelings for each other survive once the weekend is over and Autumn's old life, and old love interest, threaten to pull her from Dax's side?
