Poisoned: How a Crime-Busting Prosecutor Turned His ...

This former crime busting prosecutor turned advocate shares his poignant memoir of how he went from working as a highly paid attorney in one of Florida's tallest skyscrapers to living like a hermit in a bubble in the Arizona desert as a result of "sick building syndrome". But the desert is not where Alan's story ends.

After years of prosecuting hard-core criminals, rising legal star Alan Bell took a private sector job in South Florida's newest skyscraper. Suddenly, he suffered such bizarre medical symptoms, doctors suspected he'd been poisoned by the Mafia. Bell's rapidly declining health forced him to flee his glamorous Miami life to a sterile "bubble" in the remote Arizona desert. As his career and marriage dissolved, Bell pursued medical treatments in a race against time, hoping to stay alive and raise his young daughter, his one desperate reason to keep going. He eventually discovered he wasn't poisoned by a criminal, but by his office building. His search for a cure led him to discover the horrifying truth: his tragedy was just the tip of the iceberg. Millions of people fall ill and die each year because of toxic chemical exposures—without knowing they're at risk. Stunned by what he discovered, Bell chose to fight back, turning his plight into an opportunity. Despite his precarious health, he began collaborating with scientists dedicated to raising awareness about this issue. Soon, he also found himself drawn back into the legal field, teaming up with top lawyers fighting for those who had already fallen ill. Both a riveting medical mystery and a cautionary tale, this book puts a human face on the hidden truths behind toxic dangers assaulting us in our everyday environments—and offers practical ways to protect ourselves and our children.

It is London in the 1890s. A young woman has just taken a dose of a tonic she's been given in the belief that it will improve her complexion. About ten minutes pass and she starts to experience breathing difficulties. Another minute and she collapses. Mercifully, death arrives but the poison has not yet finished, for the process of rigor mortis has set in with unusual speed. Her body is frozen into a rigid and contorted mass. This is the horror of strychnine, the nastiest of poisons. Despite knowing all the dreadfulness of this poison, Dr Thomas Neill Cream, the Lambeth Poisoner, used it to kill several prostitutes. And who knows how many other victims experienced the horror of strychnine, for it was by no means an uncommon poison. Today, there may well be more poisons available to the individual than ever before, but there are also advances in medical examination and forensic analysis that increase the likelihood of the poisoner being caught. This book will examine poisons, both natural and man-made menaces, and cases based on a particular poison as well as information about how forensic analysis is conducted. Appealing to scientists and non-scientists alike, this enthralling book will entertain and educate and bring the reader up to date with how important chemical analysis is in crime detection.

Les Powles only had 8 hours of sailing experience when he decided to sail solo around the world. Many novices would be content to just dream of such an adventure, and maybe get as far as a solo Channel crossing a couple of years down the line. Not so Les Powles, one of the twentieth century's most extraordinary and eccentric sailors. Les was in his 50s when he built himself a yacht with little prior knowledge of boatbuilding. Remarkably he made it across the Atlantic, though his navigation skills didn't match his boatbuilding abilities; his first landfall was Brazil. He'd been aiming for Barbados - 100 miles north, and in a different hemisphere! Three complete solo circumnavigations followed, all of them full of incident. The last one saw him given up for dead when he hadn't been heard from for four months. His boat had been damaged in a storm, he'd lost all communications and had virtually

run out of food. When he sailed up the Lymington River (aged 70) in a skeletal state his arrival caused a media frenzy. Lymington Yacht Haven subsequently gave him a free berth for life. A terrific achiever who has beaten the odds, Les Powles tells his story in a lively, entertaining, humorous and compelling way. It will resonate with sailors and non sailors alike, and may inspire one of them to become the twenty-first century's Les Powles.

A timely exploration of how odor seeps into structural inequality Our sense of smell is a uniquely visceral—and personal—form of experience. As Hsuan L. Hsu points out, smell has long been spurned by Western aesthetics as a lesser sense for its qualities of subjectivity, volatility, and materiality. But it is these very qualities that make olfaction a vital tool for sensing and staging environmental risk and inequality. Unlike the other senses, smell extends across space and reaches into our bodies. Hsu traces how writers, artists, and activists have deployed these embodied, biochemical qualities of smell in their efforts to critique and reshape modernity's olfactory disparities. The *Smell of Risk* outlines the many ways that our differentiated atmospheres unevenly distribute environmental risk. Reading everything from nineteenth-century detective fiction and naturalist novels to contemporary performance art and memoir, Hsu takes up modernity's differentiated atmospheres as a subject worth sniffing out. From the industrial revolution to current-day environmental crises, Hsu uses ecocriticism, geography, and critical race studies to, for example, explore Latinx communities exposed to freeway exhaust and pesticides, Asian diasporic artists' response to racialized discourse about Asiatic odors, and the devastation settler colonialism has reaped on Indigenous smellscapes. In each instance, Hsu demonstrates the violence that air maintenance, control, and conditioning enacts on the poor and the marginalized. From nineteenth-century miasma theory theory to the synthetic chemicals that pervade twenty-first century air, Hsu takes smell at face value to offer an evocative retelling of urbanization, public health, and environmental violence.

Each week the oil and gas fields of sub-Saharan Africa produce well over a billion dollars' worth of oil, an amount that far exceeds development aid to the entire African continent. Yet the rising tide of oil money is not promoting stability and development, but is instead causing violence, poverty, and stagnation. It is also generating vast corruption that reaches deep into American and European economies. In *Poisoned Wells*, Nicholas Shaxson exposes the root causes of this paradox of poverty from plenty, and explores the mechanisms by which oil causes grave instabilities and corruption around the globe. Shaxson is the only journalist who has had access to the key players in African oil, and is willing to make the connections between the problems of the developing world and the involvement of leading global corporations and governments.

More bootilicious tales from buttmen around the globe, celebrating what they love about the male buttocks. From hot erotic stories to daring true confessions, it?

#1 NEW YORK TIMES BESTSELLER • More than one million copies sold! A “brilliant” (Lupita Nyong’o, *Time*), “poignant” (*Entertainment Weekly*), “soul-nourishing” (*USA Today*) memoir about coming of age during the twilight of apartheid “Noah’s childhood stories are told with all the hilarity and intellect that characterizes his comedy, while illuminating a dark and brutal period in South Africa’s history that must never be forgotten.”—*Esquire* Winner of the Thurber Prize for American Humor and an NAACP Image Award • Named one of the best books of the year by *The New York Time*, *USA Today*, *San Francisco Chronicle*, *NPR*, *Esquire*, *Newsday*, and *Booklist* Trevor Noah’s unlikely path from apartheid South Africa to the desk of *The Daily Show* began with a criminal act: his birth. Trevor was born to a white Swiss father and a black Xhosa mother at a time when such a union was punishable by five years in prison. Living proof of his parents’ indiscretion, Trevor was kept mostly indoors for the earliest years of his life, bound by the extreme and often absurd measures his mother took to hide him from a government that could, at any moment, steal him away. Finally liberated by the end of South Africa’s tyrannical white rule, Trevor and his mother set forth on a grand adventure, living openly and freely and embracing the opportunities won by a centuries-long struggle. *Born a Crime* is the story of a mischievous young boy who grows into a restless young man as he struggles to find himself in a world where he was never supposed to exist. It is also the story of that young man’s relationship with his fearless, rebellious, and fervently religious mother—his teammate, a woman determined to save her son from the cycle of poverty, violence, and abuse that would ultimately threaten her own life. The stories collected here are by turns hilarious, dramatic, and deeply affecting. Whether subsisting on caterpillars for dinner during hard times, being thrown from a moving car during an attempted kidnapping, or just trying to survive the life-and-death pitfalls of dating in high school, Trevor illuminates his curious world with an incisive wit and unflinching honesty. His stories weave together to form a moving and searingly funny portrait of a boy making his way through a damaged world in a dangerous time, armed only with a keen sense of humor and a mother’s unconventional, unconditional love.

Strange evidence at the crime scene convinces an investigator that he faces culprit who may be otherworldly. Reprint.

Read *The Case Against Fragrance* and you will never think about fragrance in the same way again. If you have been suffering fragrance in silence, you will know you are not alone.’ Conversation Kate Grenville had always associated perfume with elegance and beauty. Then the headaches started. Like perhaps a quarter of the population, Grenville reacts badly to the artificial fragrances around us: other people’s perfumes, and all those scented

cosmetics, cleaning products and air fresheners. On a book tour in 2015, dogged by ill health, she started wondering: what's in fragrance? Who tests it for safety? What does it do to people? The more Grenville investigated, the more she felt this was a story that should be told. The chemicals in fragrance can be linked not only to short-term problems like headaches and asthma, but to long-term ones like hormone disruption and cancer. Yet products can be released onto the market without testing. They're regulated only by the same people who make and sell them. And the ingredients don't even have to be named on the label. This book is based on careful research into the science of scent and the power of the fragrance industry. But, as you'd expect from an acclaimed novelist, it's also accessible and personal. The Case Against Fragrance will make you see—and smell—the world differently. When I was little, my mother had a tiny, precious bottle of perfume on her dressing-table and on special occasions she'd put a dab behind her ears. The smell of Arpege was always linked in my mind with excitement and pleasure—Mum with her hair done, wearing her best dress and her pearls, off for a night out with Dad. When I got old enough to have my own special occasions I also had my favourite perfume. I loved the bottles: those sensuous shapes. I loved the names and the labels, so evocative of all things glamorous. Kate Grenville is one of Australia's most celebrated writers. Her bestselling novel *The Secret River* received the Commonwealth Writers' Prize, and was shortlisted for the Man Booker Prize and the Miles Franklin Literary Award. *The Idea of Perfection* won the Orange Prize. Grenville's other novels include *Sarah Thornhill*, *The Lieutenant*, *Lilian's Story*, *Dark Places* and *Joan Makes History*. Kate lives in Sydney and her most recent works are the non-fiction books *One Life: My Mother's Story* and *The Case Against Fragrance*. 'One spritz of aftershave or perfume can leave other people retching and clutching their heads—you never see that in the ads.' Kaz Cooke 'Beginning with her own physical reaction to fragrance that begins with a headache a lot of us know ourselves, she investigates the fragrance industry and its side-effects and interweaves these facts with the personal to create an accessible work of non-fiction.' ArtsHub 'Fact-dense and extensively referenced, the book is a delight to read and never gets bogged down...While some of the science has been simplified, the book generally conveys the sense of it correctly...Well developed and thoughtful. Read *The Case Against Fragrance* and you will never think about fragrance in the same way again. If you have been suffering fragrance in silence, you will know you are not alone.' Conversation 'Grenville sets out to unlock the dark science—the volatile compounds, conspiracies and carcinogens—hiding in perfume, the ingredients of which are regularly listed as alcohol, water and the mysterious catch-all "fragrance".' New Statesman 'In this appealingly written exploration, Kate uncovers the dark side of the fragrance industry, from the carcinogens in after-shave to the hormone disruptors in perfume that mimic oestrogen.' Child 'An insightful and frightening book.' Readings 'Readable, interesting and informative.' Big Book Club 'Grenville expresses hope though that our society will find solutions to the fragrant violation of personal space based on courtesy and civility rather than on regulation and policy.' Australian Book Review 'You may be familiar with Australian novelist Kate Grenville's work but she enters new territory here. After exposure to perfumes and scents delivered ill-health her way, Grenville got curious as to why...The result is a fascinating (and worrying) exposé of the potentially damaging health effects of fragrances and the laxity of their regulation. Grenville digs into the science of scent as well as the intrigue of a multi-billion-dollar industry and makes it beautifully accessible in the process.' WellBeing 'The Orange Prize-winning novelist's discovery that she reacts badly to the artificial fragrances all around us led her to investigate what is in fragrances, what it does to people and whether it is properly tested for safety...The result is this accessible and personal book on the science of fragrance' Bookseller '[Grenville] raises valuable questions about the potentially harmful chemicals surrounding us every day and why we so unabashedly live in ignorance of them.' Reader's Digest UK, Best New Books to Read This Summer 'In some places, though, the danger [of fragrance] is beginning to be taken as seriously as passive smoking 30 years ago...it sounds silly, until you read Kate Grenville's explosive exposé and wonder why no one ever told you this stuff before.' Mail on Sunday 'An accessible, intelligent, seriously researched—and terrifying—book' Daily Mail UK

In *The Corporation, Law and Capitalism*, Baars offers a radical Marxist perspective on law, tracing the corporation from colonial times to the present multinational. 'Corporate accountability' is shown to be a red herring in the struggle for another world.
