"This edited volume identifies the various country specific factors that warrant changes in the design and implementation of competition laws. The book covers case studies of nine countries of differing sizes and at varying stages of economic development, that have at one stage or another repealed extant competition laws for new ones, and seeks to examine the motivations and contexts under which this was done. The countries examined include the Czech Republic, Hungary, India, Ireland, Poland, Serbia, South Africa, Tanzania and the UK. Tracing the evolution of competition regimes in the countries covered, the book provides lessons for countries still in the process of forming their competition regimes. The contributions show that the road to strong competition regimes is seldom smooth, and that social, economic and political factors in the country hugely impact on the pace and effectiveness of

competition reforms. The volume also addresses the issue of when the development of competition policies and laws can be seen to be in conflict with national development strategies. This book will be extremely useful for academics and students in the fields of global competition, law and economics, and development economics, as well as for policymakers. Pradeep S. Mehta is the founder Secretary General of Consumer Unity & Trust Society (CUTS), a leading economic policy research, advocacy and networking organisation, and serves on several policy-making bodies of the Government of India, related to trade, investment, competition, environment and consumer affairs"--

This book reveals the surprising role that credit, money created ex nihilo by financiers, played in raising the British government's war loans between 1793 and 1815. Using often overlooked contemporary objections to the National Debt a startling paradox is revealed as it is shown how the government's ostensible creditors had, in fact, very little "real" money to lend and were instead often reliant for their own solvency upon the very government they were lending to. By following the careers of unsuccessful loan-contractors, who went bankrupt lending to the government, to the triumphant career of the House of Rothschild; who successfully "exported" the British system of war-financing abroad with the coming of peace, the symbiotic relationship that existed between the British government and their ostensible creditors is revealed. Also highlighted is the power granted to the (technically bankrupt) Bank of England over credit and the money supply, an unprecedented and highly influential development that filled many contemporaries with horror. This is a tale of bankruptcy, stock market manipulation, bribery and institutional corruption that continues to exert its influence today and will be of interest to anyone interested in government financing, debt and the origins of modern finance.
