In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution—and the authors' excitement about it. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Social Psychology takes a sociological approach to the study of the individual in relationship to society. It's main purpose is to highlight how social psychology provides varied, yet inter-related, explanations for individuals' experiences in groups. The text tells the story of how these dynamics unfold, beginning with the central social characteristics of the individual, to processes of perception and of interaction. In the telling of this story, it also notes some of the interesting cross-cultural comparisons in regard to these dynamics.
