A frequent contributor to the New York Times magazine, Outside, Salon, and GQ, and a regular on Public Radio International's "This American Life," David Rakoff's debut collection of essays is simultaneously laugh-out-loud funny and take-your-breath-away poignant. David Rakoff is a fish out of water. Whether he finds himself on assignment climbing Mount Monadnock in New Hampshire — donning a pair of Timberlands for his trek, only to realize with horror that "the shoes I wouldn't be caught dead in might actually turn out to be the shoes I am caught dead in." — sitting quietly impersonating Sigmund Freud in a department store window...for a month, or musing on the unique predicament of being undetectably Canadian in New York City ("...what's more spicy than being Canadian, I ask you?"), Rakoff has a gift for exposing life's humour and pathos. Fraud takes us places even we didn't know we wanted to go: expeditions as varied as a search for elves in Iceland, a foray into soap opera acting, or contemplating the gin-soaked olive at the bottom of a martini glass. With the sharpest of eyes, David Rakoff explores the odd and ordinary events of life, spotting what is unique, funny and absurd in the world around him. But for all its razor-sharp wit and snarky humor, Fraud is also, ultimately, an object lesson in not taking life, or oneself, too seriously.

Over the course of a single summer, thirteen-year-old Miles O'Malley, a young boy with a fascination for the sea, copes with the trials of growing up, his infatuation with the girl next door, bickering parents, and his fear that his life and his beloved Puget Sound are slipping away from him. A first novel. Reprint.

From the host of the History channel's Brad Meltzer's Decoded: the laws of the universe like you've never experienced them before. This approachable book explains the world of physics with clarity, humor, and a dash of adventure. Physics for Rock Stars is not a weighty treatise on science, but a personal tour of physics from a quirky friend. Anyone who's ever wondered why nature abhors a vacuum, what causes magnetic attraction, or how to jump off a moving train or do a perfect stage dive will find answers and a few laughs too. No equations, numbers, or tricky concepts—just an inspiring and comical romp through the basics of physics and the beauty of the organized universe.

Barbara Res found her way into Engineering in college. Although she had the highest Mathematics grades in her school and excelled at Science, she was steered into a career of teaching because she was a girl. Rebellious against the conventional wisdom, she planned first to major in computers and then later picked engineering because of the challenge. She graduated in 1972 as one of three women in a class of 800 and entered the rough and tumble world of construction. Unfortunately, construction remains a heavily male dominated industry, but in 1972, it was a "no woman's land," and Res met resistance at every turn, in the form of discrimination, sexual harassment and intimidation. She was literally barred from the work site, a move that prevented her from advancing in her job. She quit several positions because of discrimination. Finally, she took a chance on a part time position she parlayed into a career beginner with a major Construction company in NY. After holding several "men's jobs" in contracting, Res met Donald Trump, at the Grand Hyatt project he was developing for the hotel company. She impressed him and when he had a new ground up project, he installed her as Executive in charge of Construction. The project was the world famous Trump Tower and the rest is history - a history filled with travail and triumph. All on the 68th Floor tells the story of Res's journey, what she endured and accomplished. It also describes the process of building in a way that entertains and instructs. The book is chock full of anecdotes about the rich and famous who lived and shopped at the luxurious Trump Tower and presents a picture of Donald and Ivana Trump as builders, that the world has yet to see. The author also talks about other projects, like the restoration of the Plaza Hotel and the development of the West side of Manhattan. Contracts and contractors, unions and government, politics and payoffs, all of the intrigue that goes into developing property, getting approvals, getting tenants and finally building skyscrapers. But the essence of the book is frankly feminism. It is a call to women to be themselves and do what ever job they think they can do, whatever they want to do and not allow stereotypes to influence them. It is a rebuke to the notion that women need to think or act like men, stating to the contrary that there should be no norms to follow and that people should be individuals following their instincts and not allowing society to define who they are by what they do. Res points out the dismal statistics about the number of women in construction, about the discrimination that still exists and issues a call to action to women, businesses and politics to take steps to get more women into this lucrative field, for which they are well suited. This book has something for everyone and is guaranteed to amuse, inspire and challenge everyone who reads it.

Green buildings and energy efficiency have become a very prominent part of civil engineering and architecture. The main objective behind these innovations is to encourage the design and construction of buildings that comply with environmental sustainability and energy efficiency measures. This book discusses the fundamental as well as modern approaches for energy efficiency, environmental quality enhancement, use of renewable energy technologies, and sustainable architecture and designs, etc. From theories to research to practical applications, case studies related to all contemporary topics of relevance to this field have been included in this book. As this field is emerging at a fast pace, this book will help the readers to better understand the concepts of green building and energy efficiency.

Challenges and Solutions in Ethnographic Research: Ethnography with a Twist seeks to rethink ethnography 'outside the box' of its previous tradition and to develop ethnographic methods by critically discussing the process, ethics, impact and knowledge production in ethnographic research. This interdisciplinary edited volume argues for a 'twist' that supports openness, courage, and creativity to develop and test innovative and unconventional ways of thinking and doing ethnography. 'Ethnography with a twist' means both an intentional aim to conduct ethnographic research with novel approaches and methods but also sensitivity to recognize and creativity to utilize different kinds of 'twist moments' that ethnographic research may create for the researcher. This edited volume critically evaluates new and old methodological tools and their ability to engage with questions of power difference. It proposes new collaborative methods that allow for co-production and co-creation of research material as well as shared conceptual work and wider distribution of knowledge. The book will be of use to ethnographers in humanities and social science disciplines including sociology, anthropology and communication studies.

Matilda's picky parents refuse to try new foods, so Matilda teaches herself to cook.
