Upstream raw materials and equipment and downstream demand analysis is also carried out.

Anesthesia Outside of the Operating Room is a comprehensive, up-to-date textbook that covers all aspects of anesthesia care in OOR settings, from financial considerations to anesthetic techniques to quality assurance. With increasing numbers of procedures such as cardiac catheterization and imaging taking place outside of the main OR, anesthesia providers as well as non-anesthesia members of the patient care team will find this book critical to their understanding of the principles of anesthesia care in unique settings which may have limited physical resources. The book includes chapters on patient monitoring techniques, pre-procedure evaluation and post-procedure care, and procedural sedation performed by non-anesthesia providers. Its authors address problems of anesthesia that have unique answers in OOR settings, such as patient transport and cardiac arrest, and discuss technological progress and considerations for the future. The text also covers surgical procedures and anesthetic considerations by procedure

location, such as radiology, infertility clinics, field and military environments, and pediatric settings, among many others. Select guidelines from the American Society of Anesthesiologists (ASA) are provided as well. Edited by the senior faculty from Harvard Medical School and with contributions from other academic institutions, *Anesthesia Outside of the Operating Room* provides a unique and convenient compendium of expertise and experience.

Abstract The purpose of this project is to improve efficiency by reducing turnover time in the operating room (OR) that can consequently enhance patients' and physicians' satisfaction, promote teamwork, and decrease the cost of operating room delays. The increasing trend of turnover time (TOT) requires attention for microsystem improvement in the OR of Santa Rosa Memorial Hospital. The intervention to improve efficiency is to educate the OR team members on roles and responsibilities to establish a standard workflow which can promote accountability and teamwork during the turnover process. Havelock's theory of change is used as a framework for the action plan to cultivate synergy and team engagement. Fishbone diagram, process mapping, and strength, weakness, opportunities, threats (SWOT) analysis were used as quality improvement tools to identify causes of delays and to guide the improvement process. Based on the data collected from the pilot test using the plan, do, study, act (PDSA) cycle, the post-intervention average TOT was reduced to 29 minutes compared to 37 minutes at pre-intervention phase. There is a positive response from the pilot team on the standardized workflow as reflected by the post-intervention survey. The clinical nurse leader student as the team manager has influenced the implementation of this project by providing the support and leadership needed in engaging and promoting the change in the microsystem.

Keywords: improve efficiency, turnover time, operating room, teamwork, workflow, and clinical nurse leader.

Practical resource for all healthcare professionals involved in day-to-day management of operating rooms of all sizes and complexity.

The objectives of my Internship Project were based on improving care to all of our surgical patients. Our OR has 23 operating rooms and 17 suites for interventional procedures where surgical patients with different backgrounds, ages, and different stages of morbidity and mortality come for surgical interventions (Hospital Anonymous). Our core processes were identified through process maps; fishbone diagrams, SWOT analysis, team training, protocols, and algorithms. Results displayed a statistically significant growth in antibiotic timing from 81% to 92%, antibiotic selection from 90% to 95%, and antibiotic discontinuation within 24 hours from 83% to 91% (Hospital Anonymous). Teamwork Perception Questionnaire (Appendix A, Table 2) to measure the awareness of our teamwork and teaching was conducted during huddles, time out, and debriefings. Lewin's model of change was used to implement my plan as the provider and manager of care. Improving communication in OR has an important nursing relevance to safe patient care (Appendix A, Table 1). In conclusion, the results achieved from the TeamSTEPPS training are only as strong as the effort of applying the concepts to the organization. To achieve the greatest results, there has to be support from our leadership and buy-in from our staff. The use of the debriefing tool provided data for future analysis and continuous process improvement.

Effective leadership is critical to ensuring safety, efficiency

and maximum productivity in the operating room (OR). This practical, evidence-based book unpicks the dynamics of a successful OR environment to underline the key techniques for management of policies, systems, staff members and teams. Fully updated to include recent clinical guidelines, the book provides the 'A-Z' of OR management, including sections on metrics, scheduling, human resource management, leadership principles, economics, quality assurance, recovery and ambulatory practice. New chapters include future healthcare models, emergency preparedness and budgets amongst other topics. Written by authors with unrivalled experience in the field, chapters are laid out in an easy and clinically helpful format to assist learning, and real-life case studies cover seventy-three different clinically relevant pain topics. This book is an essential guide for anyone working in the OR including anaesthesiologists, surgeons, nurses, and administrators.

The goal of this Clinical Nurse Leader (CNL) internship project was to maintain safety and quality of care of obstetric (OB) patients undergoing Cesarean Sections (C/S) after operating room for cesarean sections (ORC) is relocated from obstetric unit to the main operating room (OR). The microsystem will accomplish this through effective teamwork, clear interdisciplinary communication, collaboration, and standardization of processes involved. The institution is a not for profit rural health care facility and is a designated Critical Access Hospital; it is located in Northern California. A general obligation bond was passed in 2007 to fund seismic upgrades. Old OB unit was housed in one of the oldest buildings on campus; new seismically compliant unit is being built from the ground up. Supportive data for the projects was collected through Failure Modes and Effects Analysis (FMEA) and process map flowcharts. Strengths, weaknesses,

Read Free Swot Analysis In Operating Room Nursing

opportunities, and treats (SWOT) analysis of the microsystem was also performed. Relevant stakeholders were included in process development and continuous evaluation upon implementation. Literature review of evidence-based practice (EBP) reviewed decision to incision times and attainability of the 30 minute standard. Kurt Lewin's Change Theory of unfreezing, moving, and refreezing provided foundation to support this process change. The entire process from planning to implementation, and evaluation is 16 months. The process was implemented on September 3rd, 2014. Clinicians have maintained quality and safety of patient care of obstetric patients undergoing cesarean sections in the new location. Plan do study act (PDSA) cycles have been used to continually monitor and modify process to ensure safety and quality of care.

?Concepts and Trends in Healthcare Information Systems covers the latest research topics in the field from leading researchers and practitioners. This book offers theory-driven research that explores the role of Information Systems in the delivery of healthcare in its diverse organizational and regulatory settings. In addition to the embedded role of Information Technology (IT) in clinical and diagnostics equipment, Information Systems are uniquely positioned to capture, store, process, and communicate timely information to decision makers for better coordination of healthcare at both the individual and population levels. For example, data mining and decision support capabilities can identify potential adverse events for an individual patient while also contributing to the population's health by providing insights into the causes of disease complications. Information systems have great potential to reduce healthcare costs and improve outcomes. The healthcare delivery systems share similar characteristics with most service and productive

organizations, but also exhibit specific characteristics, which are related to the complexity and diversity of healthcare production, including the dissimilar ways healthcare professionals discharge their clinical tasks. New requirements and technological advances occurring in healthcare, information systems, and information technology have influenced the evolving role of healthcare information systems and related technology, and this book will help bring the field up to date.

Print+CourseSmart

Describes how to build a competitive edge by developing superior operations This comprehensive, practice-oriented text illustrates how healthcare organizations can gain a competitive edge through superior operations – and demonstrates how to achieve them. Underscoring the importance of a strategic perspective, the book describes how to attain excellence in the four competitive priorities: quality, cost, delivery, and flexibility. The competitive priorities are interrelated, with excellent quality laying the foundation for performance in the other competitive priorities, and with targeted improvement initiatives having synergistic effects. The text stresses the benefits of aligning the entire operations system within the parameters of a business strategy. It equips students with a conceptual mental model of healthcare operations in which all concepts and tools fit together logically. With a hands-on approach, the book clearly demonstrates the “how-tos” of effectively managing a healthcare organization. It describes how to negotiate the different perspectives of clinicians and administrators by offering a common platform for building competitive

advantage. To bring the cultural context of a healthcare organization to life, the book engages students with a series of short vignettes of a fictitious healthcare organization as it strives to achieve the status of a highly reliable organization. Integrated throughout are a variety of tools and quantitative techniques with step-by-step instructions to assist in problem solving and process improvements. Also included are mind maps linking competitive priorities and concepts, quick-reference icons, dashboards displaying measurement and process tracking, and boxed features. Several project ideas, team assignments, and creative thinking exercises are proposed. A comprehensive Instructor Packet and online tutorials further enhance the book's outstanding value. Key Features: Includes mind maps to connect competitive priorities, concepts, and tools Provides an extensive tool kit for problem solving and process improvements Presents icons throughout the text to emphasize competitive priorities and tool coverage Emphasizes measurement with dashboards and includes data files for statistical process control, queuing, and simulation Demonstrates human dynamics and organizational challenges through realistic vignettes Presents boxed features of frequently asked questions an real-world implementations of concepts Provides comprehensive Instructor Packet and online tutorials
