Don't you wish that cancer treatments could be pain free? And that you'd get well and be cancer free? For instance, do you know which supplements shrink tumors and which ones make tumors grow faster? You can find out which is which in Chapter 33. Dr. Revici even makes the bones eaten away by cancer grow back. Yes, bones eaten away by cancer return to normal on x-rays. This is the true story of a physician who found himself in trouble for curing his patients of cancer and inventing a new kind of chemotherapy that works without making you sick. Yes, this is a true story...and it's a story that could melt away your fear of cancer.

The book is based on a therapy used by more than 170 Soviet and Russian medical doctors. According to their clinical observations and hundreds of Western studies, low body oxygenation is the key factor that promotes cancer. These observations resulted in a unique clinical trial on cancer patients organized by one of the Ukrainian physicians who applied the Buteyko method on 120 people with metastatic cancer. The book "Doctors Who Cure Cancer" provides detailed analysis of the method since this is the most successful clinical trial in the whole history of cancer

research. The tested cancer therapy was based on breathing retraining or teaching patients who to breathe in accordance with medical norms days and nights. Here are some details of this trial. Early metastatic cancers are deadly, but even these cancers can be cured. For early stages of metastasis, the typical 3- or 5-year survival rate is usually about 70-80%. In this astonishing published clinical trial, the survival rate in the control group was about 76%. But 96% of people in the main group, which practiced breathing exercises (to increase body oxygenation), in addition to standard medical therapies, survived. Therefore, this self-oxygenation technique naturally reduced mortality almost 6 times! There were only 2 people in the experimental group who died, but both had serious additional health problems (heart disease and diabetes). But all those who had only cancer survived. This can be the most powerful natural cancer cure used by doctors. Can we cure cancer naturally? The trial was published in Ukrainian Oncology Journal (Kiev). This self-oxygenation method has been used by more than 160 Soviet and Russian medical doctors on over 200,000 patients, many of whom had cancers. Prior to this clinical trial, these Soviet and Russian MDs tested hundreds of people with cancers and found that all of them had heavy breathing pattern with low results for the DIY body oxygen test. These doctors discovered that dynamic of cancer

(stalemate, metastasis or regression of tumors) depends on breathing patterns and body oxygenation. They developed a program for cancer treatment that is based on simple breathing exercises and lifestyle changes. Breathing parameters in people with cancer Several Western studies (described in this book) measured minute ventilation, respiratory frequency and end-tidal CO₂ in people with cancer. All these medical publications found that virtually each and every person with cancer: breathed about 2 times more air per minute than the medical norm had very low exhaled CO₂ content (about 2 times less for people with metastasis) had increased respiratory rate at rest (up to 30-40 breaths/min instead of normal 10-12 breaths/minute). This is called "hyperventilation" or breathing more than the medical norm. Overbreathing, according to hundreds of clinical studies, reduces O₂ levels in body cells. Review of other breathing therapies for treatment of cancer Apart from the Buteyko breathing method used by more than 150 doctors, this book reviews other self-oxygenation techniques and breathing exercises that increase body oxygenation. The book suggests that people can cure cancer naturally if they normalize their automatic breathing and achieve about 40 seconds for the simple DIY body oxygen test.

A woman discovers the source of cancer is

bacterial, rather than viral, and spends years in the mid-1900s researching a protocol to successfully destroy it. But the medical establishment vilifies and ignores her findings. So she goes it alone, establishing her own medical clinic that has phenomenal survival rates. Sounds like a Michael Chrichton techno-thriller? No way! It's the real-life story of Virginia Livingston-Wheeler, M.D., a brilliant, stubborn, pioneering microbiologist and epidemiologist whose cure for cancer will one day be viewed alongside the discoveries of Pasteur, Curie, and Salk/Sabin. This story is more relevant today than ever before because the latest science is now validating her protocols. Antitubercular vaccines, autogenous vaccines (prepared from the patient's own tumor), high doses of vitamins A, C, D, E, and essential minerals, and an immune-boosting diet high in cancer-fighting foods like broccoli sprouts and tomatoes are recommended by the academy that once denounced her. That's what motivated author Edmond G. Addeo, who first wrote about the doctor in *The Conquest of Cancer* (Franklin-Watts, 1985), to revisit and update her story in this book. Addeo is convinced that laypeople- especially the millions diagnosed with new cancers each year- are anxiously searching for a real cure, while newly trained practitioners are bound to be more receptive to the innovative work of "Dr. Virginia," as he calls her. Much of the book recounts Addeo's original

research into Dr. Virginia's scientific discoveries that led to successful treatment modalities- 80 to 90 percent cure rate in comparison with the standard rate of 15 to 20 percent. Three chapters deal with hard science: why Dr. Virginia rejected the three conventional cancer treatments of surgery, chemotherapy, and radiation; how the immune system works; and her discovery of the cancer microbe and development of a vaccine to destroy it. Another chapter surveys the many articles she published about the bacterial nature of cancer and subsequent record-breaking treatment of it. Throughout the book are news updates about current cancer treatments, research projects, and nutritional developments that confirm Dr. Virginia's visionary work- promoting the body's innate ability to combat cancer.

Taking the reader on a journey into the amazing story of Emanuel Revici, M.D., *The Doctor Who Cures Cancer* provides unforgettable insights into the human body and offers new choices for the body's needs. Dr. Revici only recently died in 1998 at the incredible age of 101, leaving behind a legacy of theories, treatments, and cures. In his lifetime, his papers were published by the prestigious Pasteur Institute, he was twice awarded the French Legion of Honor Award and the Stalin Decoration, and he was granted top-secret clearance by the FBI to study radiation. This book discusses Revici's

When it comes to disease, who beats the odds – and why? When it comes to spontaneous healing, skepticism abounds. Doctors are taught that “miraculous” recoveries are flukes, and as a result they don’t study those cases or take them into account when treating patients. Enter Dr. Jeff Rediger, who has spent over 15 years studying spontaneous healing, pioneering the use of scientific tools to investigate recoveries from incurable illnesses. Dr. Rediger’s research has taken him from America’s top hospitals to healing centers around the world—and along the way he’s uncovered insights into why some people beat the odds. In *Cured*, Dr. Rediger digs down to the root causes of illness, showing how to create an environment that sets the stage for healing. He reveals the patterns behind healing and lays out the physical and mental principles associated with recovery: first, we need to

physically heal our diet and our immune systems. Next, we need to mentally heal our stress response and our identities. Through rigorous research, Dr. Rediger shows that much of our physical reality is created in our minds. Our perception changes our experience, even to the point of changing our physical bodies—and thus the healing of our identity may be our greatest tool to recovery. Ultimately, miracles only contradict what we know of nature at this point in time. Cured leads the way in explaining the science behind these miracles, and provides a first-of-its-kind guidebook to both healing and preventing disease.

An assessment of cancer addresses both the courageous battles against the disease and the misperceptions and hubris that have compromised modern understandings, providing coverage of such topics as ancient-world surgeries and the development of present-day treatments. Reprint. Best-selling winner of the Pulitzer Prize. Includes reading-group guide.

"The inspiring memoir of a young doctor and former college athlete who became a champion for people suffering from rare, under-researched diseases--all while battling his own. A former Georgetown quarterback nicknamed "The Beast," David Fajgenbaum was also a force in medical school, where he was known for his unmatched mental stamina. But

things changed dramatically when he began suffering from inexplicable fatigue. In a matter of weeks, his organs were failing and he was read his last rites. Doctors were baffled over a condition they had yet to even diagnose; floating in and out of consciousness, Fajgenbaum prayed for the equivalent of game day overtime: a second chance. Miraculously, Fajgenbaum survived, but only to endure repeated near-death relapses from what would eventually be identified as a form of Castleman disease--an extremely deadly and rare condition that acts like a cross between cancer and an autoimmune disease. When he relapsed on the only drug in development and realized that the medical community was unlikely to make progress in time to save his life, Fajgenbaum turned his desperate hope for a cure into concrete action: between hospitalizations he studied his own charts and tested his own blood samples, looking for clues that could unlock a new treatment. With the help of family, friends and mentors, he also reached out to other Castleman disease patients and physicians, and eventually came up with an ambitious plan to crowdsource the most promising research questions and recruit world-class researchers to tackle them; instead of waiting for the scientific stars to align, he proposed to align them himself. More than five years later and now married to his college sweetheart, his hard work has paid off: a treatment that he identified has

His incredible story demonstrates the potency of hope, and what can happen when forces of determination, love, family, faith and serendipity collide"--

today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb's effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta's family did not learn of her "immortality" until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta's daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn't her children afford health insurance? Intimate in feeling, astonishing
