Together, these two aircraft represent the first machines in the First ...

New Windsock Datafiles - World at War

As far as I know German built planes were only used early in the war like the Albatros B.I. Austrian planes had better workmanship, at least that's what the high command thought. The allies used Camels, Bristol fighters, re.8 with the British, the Americans Macchi M.5 and L types I think as well as Caproni CA.3 bombers.

Beskrivelse af det tyske fly Albatros B. II, som i et større antal var operative under den 1. verdenskrig.

The classic bestselling autobiography of the most successful fighter pilot of the First World War. This is the memoir of the undisputed top gun of World War I's aerial war, Captain Manfred von Richthofen, who shot down 80 Allied aircraft. Originally published in German in late 1917 as *Der Rote Kampfflieger* (The Red Air Fighter), it was a runaway bestseller. The English language edition followed in 1918 without any official deal with the German publishers as it was argued that Richthofen's accounts of combat against the Allied air force aircraft provided valuable intelligence to use against the enemy. Originally a cavalryman, Manfred transferred to the Imperial German Army Air Service in May 1915 and quickly distinguished himself as a fighter pilot. During 1917 he became leader of Jagdgeschwader 1. It was better known as the "Flying Circus" because of its aircraft's bright colors and because the squadron moved like a traveling circus, from place to place as a self-contained unit so that it appeared wherever the fighting was the thickest. It would be operating at Verdun one week only to be north of Arras the next. A few days later, it would be down on the Somme. Richthofen was a brilliant tactician, although his modus operandi was as simple as it was deadly. Typically, he would dive from above to attack with the advantage of the sun behind him (the victim would not see him coming, blinded by glare), with other pilots of his flying circus covering his rear and flanks. By 1918, he was regarded as a national hero in Germany and held the country's highest honor, the "Blue Max." Richthofen was well-known in the Allied countries and a respected advisor of military aviators. Newly illustrated with twenty-one contemporary images. Includes many of the Red Baron's eighty combat reports, contemporary interviews with a selection of his surviving victims, and an extra chapter on the death in combat of von Richthofen.

In 1916 German aerial domination, once held sway by rotary-engined Fokker and Pfalz E-type wing-warping monoplanes, had been lost to the more nimble French Nieuports and British DH 2s which not only out-flew the German fighters but were present in greater numbers. Born-from-experience calls from German fighter pilots requested that, rather than compete with the maneuverability of these adversaries, new single-engine machines should be equipped with

higher horsepower engines and armed with two rather than the then-standard single machine gun. The Robert Thelen-led Albatros design bureau set to work on what became the Albatros D.I and D.II and by April 1916, they had developed a sleek yet rugged machine that featured the usual Albatros semi-monocoque wooden construction and employed a 160hp Mercedes D.III engine with power enough to equip the aeroplane with two forward-firing machine guns. In all, 500 D.IIIs and 840 D.III(OAW)s were produced and saw heavy service throughout 1917.

In 1916 German aerial domination had been lost to the French and British fighters. German fighter pilots requested an aircraft that was more powerful and more heavily armed, and the Albatros design bureau set to work on what was to become an iconic aircraft design. By April 1916, they had developed the Albatros D.I, that featured the usual Albatros semi-monocoque wooden construction with a 160hp Mercedes engine and two forward-firing machine guns. Alongside the development of the D.I, Albatros had also designed and built a second machine that was similar to the D.I – the Albatros D.II. Although there were several external differences between the two aircraft, it is important to note that these machines evolved simultaneously and that the D.II was not the result of post-combat feedback from D.I pilots. With the inclusion of these aircraft into their reorganized air force, Germany was able to regain control of the skies by autumn 1916. Along with the later designs they inspired, the Albatros D.I and D.II were instrumental in allowing the Germans to prosecute their domination through 'Bloody April' and well into the summer months that followed.

The French firm of Nieuport built some of the most numerous, best-looking and effective fighting planes of World War I -- they type 17 and 29 gaining particular fame. Ray Sanger's authoritative book covers all these aircraft in detail, paying attention to both the technical detail and operational use. Illustrated throughout with rare photographs this will be an indispensable volume for any World War I aviation library.

Covering the aircraft of 21 nations, this book offers illustrated portraits of 330 of the best-known and most significant military aircraft in history, from the canvas-covered biplanes of World War I to the technological marvels of today, and includes technical data and aviation lore.

Initially formed to assist in the defence of the city of Metz against French bombing raids, Royal Prussian Jagdstaffel 17 would go on to become one of the most distinguished German fighter units of World War 1. Its first victory was scored by the pilot whose story is inextricably interwoven with that of his unit – the 'Blue Max' recipient Julius Buckler. He was largely responsible for inspiring the unit's unique Esprit de Corps, expressed in its famous and unique 'battle-cry' of 'Malaula!' Indeed, in its final days the unit gained the nickname Zirkus Buckler, or the 'Buckler Circus'. Besides Buckler, Jasta 17 boasted such aces as Karl Strasser, Alfred Fleischer and Christian Donhauser. In addition, the roster included colourful characters like the successful Jewish airman Jakob Wolff, who at over 48 years of age was the oldest German fighter pilot of the war. The story of this illustrious unit is told with many first-hand accounts by Buckler, Fleischer and others, as well as dozens of rare archival photos of the unit's beautifully decorated fighter aircraft.

The latest volume in the Airfields and Airmen series covers the Arras area. It includes a visit to the grave of Albert Ball VC and the graves of Waterfall and Bayly, the first British fliers killed in action. There is a visit to the aerodrome from which Alan McLeod took off from to earn his VC and to the grave of Viscount Glentworth, killed while flying with 32 Squadron. The German side is well covered with visits to their cemeteries and aerodromes. This well researched book relives the deadly thrills of war in the air over the battlefields of the Western Front.

Manfred von Richthofen became a fighter pilot on the Western Front in August 1916. By January 1917, Richthofen had shot down fifteen aircraft and had been appointed commander of his own unit. He painted the fuselage of his Albatros D-III a bright red and was nicknamed the Red Baron. In June 1917, Richthofen was appointed commander of the German Flying Circus. Made up of Germany's top fighter pilots, this new unit was highly mobile and could be quickly sent to any part of the Western Front where it was most needed. Richthofen and his pilots achieved immediate success during the air war over Ypres during August and September. Manfred von Richthofen was killed on 21st April 1918. Richthofen had destroyed 80 allied aircraft, the highest score of any fighter pilot during the First World War. This book is divided into three sectors of the WWI front line in which von Richthofen operated. Each area is conveniently reached within hours. Airfield sites, memorials and the graves of Manfred's famous victims are described and directions for the battlefield walker are included with information on related museums and historic sites with special association with this most famous of fighter pilots.
